owing to climate change related uncertainties and anticipated population growth different parts of the developing and the developed world particularly urban areas are experiencing water shortages or flooding and security of fit for purpose supplies is becoming a major issue the emphasis on decentralized alternative water supply systems has increased considerably most of the information on such systems is either scattered or focuses on large scale reuse with little consideration given to decentralized small to medium scale systems alternative water supply systems brings together recent research into the available and innovative options and additionally shares experiences from a wide range of contexts from both developed and developing countries alternative water supply systems covers technical social financial and institutional aspects associated with decentralized alternative water supply systems these include systems for greywater recycling rainwater harvesting recovery of water through condensation and sewer mining a number of case studies from the uk the usa australia and the developing world are presented to discuss associated environmental and health implications the book provides insights into a range of aspects associated with alternative water supply systems and an evidence base through case studies on potential water savings and trade offs the information organized in the book is aimed at facilitating wider uptake of context specific alternatives at a decentralized scale mainly in urban areas this book is a key

reference for postgraduate level students and researchers interested in environmental engineering water resources management urban planning and resource efficiency water demand management building service engineering and sustainable architecture it provides practical insights for water professionals such as systems designers operators and decision makers responsible for planning and delivering sustainable water management in urban areas through the implementation of decentralized water recycling authors fayyaz ali memon centre for water systems university of exeter uk and sarah ward centre for water systems university of exeter uk

the proceedings contain papers accepted for the 17th ispe international conference on concurrent engineering which was held in cracow poland september 6 10 2010 concurrent engineering ce has a history of over twenty years at first primary focus was on bringing downstream information as much upstream as possible by introducing parallel processing of processes in order to prevent errors at the later stage which would sometimes cause irrevocable damage and to reduce time to market during the period of more than twenty years numerous new concepts methodologies and tools have been developed during this period the background for engineering manufacturing has changed extensively now industry has to work with global markets the globalization brought forth a new network of experts and companies across many different domains and fields in distributed environments these collaborations integrated with very high level of professionalism and specialisation provided the basis for innovations in design and manufacturing and succeeded in creating new products on a global market

much research has been carried out and a lot of progress has been made towards the use of composite materials in a wide field of tribological applications in recent years studies have been made to determine to what degree phenomena governing the tribological performance of composites can be generalized and to consolidate interdisciplinary information for polymer metal and ceramic matrix composites the importance of promoting better knowledge in the areas of friction lubrication and wear in general is demonstrated by the contents of this volume it covers a wide range of subjects extending from fundamental research on the tribological characteristics of various multi phase materials up to final applications of composites in wear loaded technical components besides the emphasis on composites tribology the great practical aspect of the field in many industrial applications is also reviewed by authors who are engaged in applied research as well as those in more academic activities the articles in this volume will facilitate both researchers and mechanical designers in their work towards a set of predictive materials engineering related models for a more reliable use of composites as tribo materials through the study of and observation of the tribology of

sensibly formulated composite systems may emerge a clear and more profound understanding of the subject of tribology in this sense this book offers a major and critical evaluation of the state of understanding of the principles of tribology and its ability to serve the practical and commercial needs of this technology generally and particularly in the context of composite systems

this state of the art companion assembles and assesses the extant research available on teacher education and provides clear guidelines on future directions it addresses an important need in a collection that will be of value for teachers teacher educators policymakers and politicians there has been little sustained long term or systematic research to provide empirical support for the broad aspects of teacher education policy largely because such research has been chronically underfunded and based on traditional practitioner knowledge many of the changes to teacher education are contentious and yet are occurring in rapid succession these policies and movements have important consequences for education teacher quality and the future of the teaching profession at the same time the policies and initiatives that support these changes seem to be based more on ideology business interests and tradition than on research and empirical findings the nature quality and effectiveness of teacher preparation have increasingly become a central focus for education policy worldwide in a fiercely argued debate among governments think tanks world policy agencies education researchers and teacher organisations

in his newest book award winning environmental journalist david steinman makes sense out of the tangle of issues surrounding climate change he provides clear simple steps we can all take to make more responsible environmental choices in our everyday lives from the food we put on our tables to the products we use in our homes and the cars we buy he shows for example how changing even a simple habit of driving to the grocery store to ordering food online can save almost 900 miles a year reducing both traffic congestion and petroleum emissions steinman traveled the country from his home base in california through the united states to talk with farmers businessmen professors housewives counter terrorism experts and many others to find the link between environmentalism conservatism patriotism and national security he reveals how our reliance on petroleum based products and chemical pesticides negatively impacts our health our national security and our planet he presents a number of fascinating anecdotes and case studies about people and companies working to live green using ecological wisdom as the basis for their decision making in the process improving everything from their children s iqs to their company s bottom line
