ultrasound in liquid and solid metals focuses on the effect of intensive ultrasound on metals including the analysis of the development of cavitation and acoustic flows in melts mechanism of metals spraying and crystallization the formation of dislocation structure in crystals diffusion phase transformation and plastic deformation physical fundamentals of intensive ultrasound effects are covered and detailed discussions are presented on the engineering principles of

equipment and material design for the practical use of ultrasound in the refining of melts crystallization of ingots and molds pulverization plating pressure working of metals surface strengthening and other processes

this manual provides detailed carefully worked out solutions to odd numbered exercises as well as sample chapter tests with answers

this book describes and explains the entire process of designing and building a distributed object application with the visualage smalltalk distributed feature this book contains an overview of the features and architecture of smalltalk s distributed feature sample application components with supporting documentation to illustrate design and coding and recommendations for building distributed object applications with visualage learn how to set up the development environment and special considerations for testing run time configurations optimization and performance tuning for software development managers designers and others planning to develop client server and peer to peer applications with distributed objects using visualage

finite mathematics and calculus with applications was written for the two semester finite math and applied calculus course for students majoring in a variety of fields business economics social science and biological and physical science widely known for incorporating interesting relevant and realistic applications this new edition now offers many more real applications citing current data sources the new edition now offers more opportunities for use of technology allowing for increased visualization and a better understanding of difficult concepts a dedicated site rounds out the teaching and learning package offering extended applications from the book skill mastery quizzes and graphing calculator programs tied to the text

audience anyone concerned with the science techniques and ideas of how decisions are made book jacket

supplies the most essential concepts and methods necessary to capitalize on the innovations of industrial automation including mathematical fundamentals ergonometrics industrial robotics government safety regulations and economic analyses

in this revised and enhanced second edition of optimization concepts and applications in engineering the already robust pedagogy has been enhanced with more detailed explanations an increased number of solved examples and end of chapter problems the source codes are now available free on multiple platforms it is vitally important to meet or exceed previous quality and reliability standards while at the same time reducing resource consumption this

textbook addresses this critical imperative integrating theory modeling the development of numerical methods and problem solving thus preparing the student to apply optimization to real world problems this text covers a broad variety of optimization problems using unconstrained constrained gradient and non gradient techniques duality concepts multiobjective optimization linear integer geometric and dynamic programming with applications and finite element based optimization it is ideal for advanced undergraduate or graduate courses and for practising engineers in all engineering disciplines as well as in applied mathematics

introducing students to the scientific study of peace and war conflict war and peace an introduction to scientific research edited by sara mclaughlin mitchell and john a vasquez provides an overview of current scholarship in this dynamic area of study focusing on the factors that shape relationships between countries and that make war or peace more likely this collection of articles by top scholars explores such key topics as dangerous dyads alliances territorial disputes rivalry arms races democracy peace trade international organizations territorial peace and nuclear weapons each article is followed by the editors commentary a major contributions section highlights the article s theoretical advances and relates each study to the broader literature while a methodological notes section carefully walks students through the techniques used in the analysis methodological topics include research design percentages probabilities odds ratios statistical significance levels of analysis selection bias logic duration models and game theory models

content moderation in the age of ai has become a complex aspect of managing online spaces as digital platforms grow and the volume of user generated content expands exponentially traditional methods of human moderation are no longer sufficient artificial intelligence technologies including machine learning and natural language processing have emerged as powerful tools to help platforms quickly and efficiently detect and remove harmful or inappropriate content such as hate speech misinformation and graphic material however these ai systems come with challenges including issues of bias lack of context understanding and the difficulty of moderating nuanced or subjective content striking a balance between automation and human oversight is essential to ensure content moderation remains effective fair and transparent as ai evolves the responsibility of creating ethical accountable moderation systems falls on

both tech companies and policymakers ensuring that ai powered moderation can foster a safe and inclusive online environment content moderation in the age of ai examines the strategies and tools that businesses can use to ensure ai generated content is moderated according to ethical legal and social standards it explores potential risks associated with unmoderated ai output such as copyright issues misinformation harmful content deepfakes and biased material and explores ways in which policymakers businesses and academia can mitigate these dangers this book covers topics such as misinformation psychology and social media and is a useful resource for sociologists psychologists engineers business owners academicians researchers and data scientists

take the next step in integrated product and process development this pioneering book is the first to apply state of the art computational intelligence techniques to all phases of manufacturing system design and operations it equips engineers with a superior array of new tools for optimizing their work in integrated product and process development drawing on his extensive experience in the field of advanced manufacturing andrew kusiak has masterfully embedded coverage of data mining expert systems neural networks autonomous reasoning techniques and other computational methods in chapters that cover all key facets of integrated manufacturing system design and operations including process planning setup reduction production planning and scheduling kanban systems manufacturing equipment selection group technology facilities and manufacturing cell layout warehouse layout manufacturing system product and component design supplier evaluation each chapter includes questions and problems that address key issues on model integration and the use of computational intelligence approaches to solve difficulties across many areas of an enterprise examples and case studies from real world industrial projects illustrate the powerful application potential of the computational techniques comprehensive in scope and flexible in approach computational intelligence in design and manufacturing is right in step with the enterprise of the future extended virtual model driven knowledge based and integrated in time and space it is essential reading for forward thinking students and professional engineers and managers working in design systems manufacturing and related areas

issues for feb 1965 aug 1967 include bulletin of the institute of management sciences

a concise non technical introduction to the important principles of management science that introduces the most commonly used models and techniques combining text with case studies and emphasizing sensitivity analysis throughout it introduces students to the practical aspects of decision problems that occur in the management context of a wide variety of fields and disciplines the book includes many exercises and actual case studies enabling students to practice formal analyses and understand models in the classroom separate chapters are featured on integer programming forecasting newsboy analysis and detailed
