this new book will guide both the experimentalist and theoretician through their compulsory laboratory courses forming part of an undergraduate physics degree it shows students and interested readers the value and beauty within a carefully planned and executed experiment and will help them to develop the skills to carry out experiments themselves

this textbook provides the knowledge and skills needed for thorough understanding of the most important methods and ways of thinking in experimental physics the reader learns to

design assemble and debug apparatus to use it to take meaningful data and to think carefully about the story told by the data key features efficiently helps students grow into independent experimentalists through a combination of structured yet thought provoking and challenging exercises student designed experiments and guided but open ended exploration provides solid coverage of fundamental background information explained clearly for undergraduates such as ground loops optical alignment techniques scientific communication and data acquisition using labview python or arduino features carefully designed lab experiences to teach fundamentals including analog electronics and low noise measurements digital electronics microcontrollers fpgas computer interfacing optics vacuum techniques and particle detection methods offers a broad range of advanced experiments for each major area of physics from condensed matter to particle physics also provides clear guidance for student development of projects not included here provides a detailed instructor s manual for every lab so that the instructor can confidently teach labs outside their own research area

you might be wondering how can there be a science lab at home home is home i eat sleep play and do homework there a science lab is where scientists hang out discovering even more things for me to learn in school besides aren t all scientists guys with white coats and long gray beards who mutter things like  $e mc^2$  or ah ha i ve found the secret of living forever well not exactly scientists don t always work in laboratories don t necessarily wear white coats and don t talk like they were starring in a sci fi thriller there are some scientists with long gray beards usually they are older men almost anyone can make scientific observations and do experiments even kids and anywhere that you make observations and perform experiments can be considered a science laboratory entomologists scientists who study insects do most of their work in forests jungles and backyards herpetologists scientists who study reptiles such as snakes and lizards hunt for their subjects where they live in wooded areas swamps and fields some astronomers scientists who study planets stars galaxies and everything else in the cosmos setup telescopes in their backyards in parks or on mountaintops these scientists study in field laboratories and so can your home can be your field laboratory did you ever wonder how certain things in your home worked when i was a youngster lots of years ago when the only good music was rock and roll long before walkman type tape players and cds i always wanted to know what made things work things like light switches refrigerators dish washers washing machines toilets sinks freezers door locks hinges vacuum cleaners coffee makers juicers windows and plumbing pipes after disassembling the easy part and reassembling the harder part lots of household stuff i learned that even the most complex of these items worked on some very basic principles all of them worked when i was able to put them back together properly because of science and applied science which is called technology once i looked at the simple components that make these items work they were easy or at least easier to understand this book will show you how to perform experiments and observations at home and help you figure out where and how science is used in your home scattered throughout these chapters you will find a safety symbol ask an adult to help you wherever you see this symbol the symbol indicates that the experiment is a little bit dangerous or difficult i d hate to see you get discouraged or hurt while you are learning about science in your home throughout the book you ll also find words in italic type these words are

defined in the glossary at the back of the book there are three other books in this series that explain how you can conduct scientific observations and experiments with material found in hardware stores housewares stores and supermarkets if you like this book and think your friends parents and teachers would like it the author s name is bob friedhoffer go to the library and check out the books or even better go to the bookstore and buy them if you don t like this book don t tell anyone
