homotopy analysis method in nonlinear differential equations presents the latest developments and applications of the analytic
 approximation method for highly nonlinear problems namely the homotopy analysis method ham unlike perturbation methods the ham
 has nothing to do with small large physical parameters in addition it provides great freedom to choose the equation type of linear sub
 problems and the base functions of a solution above all it provides a convenient way to guarantee the convergence of a solution this book
 consists of three parts part i provides its basic ideas and theoretical development part ii presents the ham based mathematica package bvph
 1 0 for nonlinear boundary value problems and its applications part iii shows the validity of the ham for nonlinear pdes such as the
 american put option and resonance criterion of nonlinear travelling waves new solutions to a number of nonlinear problems are presented
 illustrating the originality of the ham mathematica codes are freely available online to make it easy for readers to understand and use the
 ham this book is suitable for researchers and postgraduates in applied mathematics physics nonlinear mechanics finance and engineering
 dr shijun liao a distinguished professor of shanghai jiao tong university is a pioneer of the ham

an insightful exploration of the key aspects concerning the chemical analysis of antibiotic residues in food the presence of excess residues

from frequent antibiotic use in animals is not only illegal but can pose serious health risks by contaminating products for human consumption such as meat and milk chemical analysis of antibiotic residues in food is a single source reference for readers interested in the development of analytical methods for analyzing antibiotic residues in food it covers themes that include quality assurance and quality control antibiotic chemical properties pharmacokinetics metabolism distribution food safety regulations and chemical analysis in addition the material presented includes background information valuable for understanding the choice of marker residue and target animal tissue to use for regulatory analysis this comprehensive reference includes topics on general issues related to screening and confirmatory methods presents updated information on food safety regulation based on routine screening and confirmatory methods especially lc ms provides general guidance for method development validation and estimation of measurement uncertainty chemical analysis of antibiotic residues in food is written and organized with a balance between practical use and theory to provide laboratories with a solid and reliable reference on antibiotic residue analysis thorough coverage elicits the latest scientific findings to assist the ongoing efforts toward refining analytical methods for producing safe foods of animal origin
