the laboratory computer a practical guide for physiologists and neuroscientists introduces the reader to both the basic principles and the actual practice of recording physiological signals using the computer it describes the basic operation of the computer the types of transducers used to measure physical quantities such as temperature and pressure how these signals are amplified and converted into digital form and the mathematical analysis techniques that can then be applied it is aimed at the physiologist or neuroscientist using modern computer data acquisition systems in the laboratory providing both an

understanding of how such systems work and a guide to their purchase and implementation the key facts and concepts that are vital for the effective use of computer data acquisition systems a unique overview of the commonly available laboratory hardware and software including both commercial and free software a practical guide to designing one's own or choosing commercial data acquisition hardware and software

there has always been some tension between proponents of hypothesis driven and discovery driven research in the broad field of life sciences academic research has been primarily focused on hypothesis driven research however the success of the human genome project a discovery driven research approach has opened the door to adding other types of discovery driven research to a continuum of research approaches in contrast drug discovery research in the pharmaceutical industry has embraced discovery driven research for many years a good example has been the discovery of active compounds from large chemical libraries through screening campaigns the success of the human genome project has also demonstrated the need for both academic researchers and industrial researchers to now understand the functions of genes and gene products the cell is the basic unit of life and it has been at the cellular level where function can be demonstrated most cost effectively and rapidly high content screening hcs was developed by cellomics inc in the mid 1990s to address the need for a platform that could be used in the discovery driven research and development required to understand the functions of genes and gene products at the level of the cell
