for undergraduate courses in steel design both load and resistance factor design lrfd and allowable stress design asd methods of designing steel structures are presented throughout the book the book is carefully designed so that an instructor can easily teach lrfd or asd material exclusively pertaining to asd is shaded this text is presented using an easy to read student friendly style

the material is presented in a clear reader friendly style this best selling text has been fully updated to conform to the latest american manual of steel construction both load and resistance factor design lrfd and allowable stress design asd are now covered and calculations are worked out side by side to allow for easy identification of the different methods use of si units as an addition to the primary use of inch pound units new coverage of

lateral torsional bending and hollow structural sections for steel design students and professionals

the undergraduate course in structural steel design using the load and resistance factor design method lrfd the text also enables practicing engineers who have been trained to use the allowable stress design procedure asd to change easily to this more economical and realistic method for proportioning steel structures the book comes with problem solving software tied to chapter exercises which allows student to specify parameters for particular problems and have the computer assist them on screen information about how to use the software and the significance of various problem parameters is featured the second edition reflects the revised steel specifications lrfd of the american institute of steel construction
