quantitative data analysis for language assessment volume i
fundamental techniques is a resource book that presents the most
fundamental techniques of quantitative data analysis in the field of
language assessment each chapter provides an accessible explanation
of the selected technique a review of language assessment studies
that have used the technique and finally an example of an authentic
study that uses the technique readers also get a taste of how to
apply each technique through the help of supplementary online
resources that include sample data sets and guided instructions
language assessment students test designers and researchers should
find this a unique reference as it consolidates theory and
application of quantitative data analysis in language assessment

this book provides the analytical tools to characterize nonlinear distorted multicarrier signals and optimal sub optimal receivers employed in high data rate communication systems unified theoretical analysis of nonlinear multicarrier schemes introduces new optimal and sub optimal receivers for nonlinear distorted signals that can use nonlinear distortion to improve performance when compared with common receivers it addresses the analysis of nonlinear systems with stochastic inputs and establishes new receivers designs for multi carrier communication systems with nonlinearities the authors also include the characterization and definition of optimum and sub optimum receivers for nonlinear distorted signals that may use the nonlinear distortion to improve receiver performance over the existing ones the book also includes a set of applications where the analytical unified method for characterization of nonlinear distortion can be applied the two final chapters of the book include systems like mimo ofdm and the extension to optical systems these techniques are the base of 5g wi fi and future 6g mobile networks the book will be a valuable resource for design engineers industrial engineers applications engineers and researchers working on multi carrier systems power amplifiers modelling and design

the fourth volume of the asc series on advanced composites contains critical information on static and dynamic composite failure and how it is predicted and modeled using novel computational methods and micromechanical analysis

this book aims to provide researchers who are new or relatively new to qualitative research with the methodological tools and conceptual maps they need to navigate their way through the process it describes the uncertainties surrounding qualitative research and the many dilemmas faced by researchers it illustrates these by drawing on the experiences of researchers with varying degrees of expertise in qualitative research it also provides readers with the necessary background knowledge and raises their awareness of the questions they will need to address to help them make informed decisions about how to deal with these uncertainties and dilemmas the contents of the book are organized in a way that reflects the three main objectives that the authors had in mind the first objective was to provide readers with the necessary background knowledge and an awareness of the questions they will need to address in order to make informed decisions about whether to conduct qualitative research and if they decide to follow a qualitative path which particular qualitative approaches would be suited to their research goals the second objective was to equip readers with the basic tools to carry out their analysis by providing detailed contextualized coverage of the practicalities of the qualitative methods approaches in addition the book includes accounts of an actual analysis of a specific data set in a step by step manner using the approaches the third objective was to provide the reader with guidance as to how to write up qualitative research in general and the ethical considerations of qualitative inquiry in the concluding chapter
