i am impressed by the scope

of engineering an endless frontier and fascinated by sunny auyang s comprehensive knowledge of the subject this is just the kind of book the national academy of engineering has been encouraging to promote the importance of engineering to the public it will have a long shelf life in that it pulls together material that is not readily accessible and will serve as a reference for anyone interested in engineering as a profession engineering needs this book john hutchinson harvard university engineering an endless frontier is extraordinary in scope sunny auyang describes the different kinds of contemporary engineering practices and productions attempts to provide historical background explains the scientific basis for engineering innovation in different fields and addresses the broad systems level managerial entrepreneurial and design activities of professionals it s rare to find a single author who can grasp and explain the essential features of modern technologies across such an array of industrial sectors and engineering disciplines and explain how they work why they work they way they do and what is required for their innovation development and yes even maintenance louis l bucciarelli professor emeritus of engineering and technology studies mit

the history of technological change is an ever growing tool box from which the contemporary engineer can draw innovation involves adventure and the highs and lows of success and failure are a catalogue of humanity just as other histories of wars and government here the author explores describes and illustrates engineering design and what conditions events cultural climate and personalities have brought it to its present state the topics in this book are based on paradigm shifts the contribution of individuals important structures and disasters in discussing these the author puts across the modern concepts of structure and the approaches used it will thus prove an inspirational text for architects engineers and the interested lay reader google books

this book describes the origins and evolution of canada s 30 year natural sciences and engineering research council chairs for women in science and engineering program the book starts literally with a bang right as montreal and all of canada were rocked by the 1989 ecole polytechnique massacre of 14 women describing how the chair program took on a frenetic pace as a single chairholder monique frize tried to respond to an entire country s concerns about women in engineering both as students and as professionals the authors first cover the program from 1989 through

1997 when the program was expanded to five regional chairs of which there have been over three generations by now the book then provides synopses of each chairholder's comprehensive regional program to recruit retain and advance girls and women in stem organized by generation providing a unique historical view of the changing landscape for research and outreach programs to increase the participation of women in male dominated scientific fields readers will find an effective model for national programs addressing equity diversity and inclusion in stem and be inspired by the 16 strong role models who pioneered blended careers in stem and gender equity advocacy
