the student solutions manual to accompany atkins physical chemistry 10th edition provides full worked solutions to the a exercises and the odd numbered discussion questions and problems presented in the parent book the manual is intended for students and instructors alike and provides helpful comments and friendly advice to aid understanding

this textbook introduces the molecular side of physical chemistry it offers students and practitioners a new approach to the subject by presenting numerous applications and solved problems that illustrate the concepts introduced for varied and complex technical situations the book offers a balance between theory tools and practical applications the text aims to be a practical manual for solving engineering problems in industries where processes depend on the chemical composition and physical properties of matter the book is organized into three main topics i the molecular structure of matter ii molecular models in thermodynamics and iii transport phenomena and mechanisms part i presents methods of analysis of the molecular behavior in a given system while the following parts use these methods to study the equilibrium states of a material system and to analyze the processes that can take place when the system is in a state of non equilibrium in particular the transport phenomena molecular physical chemistry for engineering applications is designed for upper level undergraduate and graduate courses in physical chemistry for engineers applied physical chemistry transport phenomena colloidal chemistry and transport transfer processes the book will also be a valuable reference guide for engineers technicians and scientists working in industry offers modeling techniques and tools for solving exercises and practical cases provides solutions and conclusions so students can follow results more closely step by step problem solving enables

students to understand how to approach complex issues

with the development of a variety of exciting new areas of research involving computational chemistry nano and smart materials and applications of the recently discovered graphene there can be no doubt that physical chemistry is a vitally important field it is also perceived as the most daunting branch of chemistry being necessarily grounded in physics and mathematics and drawing as it does on quantum mechanics thermodynamics and statistical thermodynamics with his typical clarity and hardly a formula in sight peter atkins very short introduction explores the contributions physical chemistry has made to all branches of chemistry providing an insight into its central concepts atkins reveals the cultural contributions physical chemistry has made to our understanding of the natural world about the series the very short introductions series from oxford university press contains hundreds of titles in almost every subject area these pocket sized books are the perfect way to get ahead in a new subject quickly our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

a decade has elapsed since the discovery of c60 in molecular beams and five years since the first synthesis of solid c60 at the time the opening of a new era for chemistry was foreseen and high expectations were shared by physicists and material scientists where are we now where are we aiming what can we expect from now on the answer will be found in this volume written by the protagonists of the fullerene adventure there is a whole new generation of materials now in the form of molecules solids nanostructures either directly derived from bucky or inspired by it they continue to create new challenges to our fundamental understanding and seem to be ready for important long lasting applications audience the book is mainly directed to specialized scientists physicists chemists material scientists and biochemists who will find it a source of learning and inspiration younger researchers too will find it fascinating since it allows them to learn about and quickly acquire a critical view of an interdisciplinary frontier
