*the fourth edition of society and the environment centers its discussion on realistic solutions to the problems that persist and examines current controversies within a socio-organizational context, shifting focus away from simply explaining what is wrong with the world around us. introducing this pragmatic environmentalism, carolan discusses the complex pressures and variables that exist where ecology and society collide, with population growth, the increase in demands for food and energy, and transportation, and its outsized influence on urban and community patterns, with further attention given to the social phenomena and structural dynamics driving today's environmental problems. the book concludes with an important reflection on truly sustainable solutions and what constitutes meaningful social change. each chapter in this interdisciplinary text follows a three-part structure, beginning with an overview of what is wrong and why this leads into a discussion on each issue's wide-ranging implications, and finally, a balanced consideration of realistic solutions, featuring updated and expanded examples, discussion points, and coverage of recent developments, including the us withdrawing from the paris agreement, booming national economies, and wealth distribution, growing global interest in environmental justice, with particular focus on the links between injustice and race and inequality, climate change, and renewable energy. this new edition remains an essential companion for courses on environmental sociology and sustainability.*

*society and nature is a lively and highly accessible introduction to the sociology of the environment. the book provides a comprehensive guide to contemporary issues and current debates, including society, nature, and the enlightenment industry, and environmental transformation, commodification, consumption, the network society, and human identity, human biology, citizenship, and new social movements, combining insights from contemporary sociology, politics, developmental biology, and psychology. peter dickens suggests that environmental degradation is largely due to humanity's narcissistic demand that the environment be made into a commodity to be consumed. meanwhile, human biology is also being modified: people's bodies are being rebuilt in ways that reflect their class positions. people and their surroundings have always adapted according to the demands of society, but modern capitalist society is changing the environment and its people in profound, potentially catastrophic ways, shaping both human and non-human nature in its own image. the book contains a number of student features to interest and guide the reader, as well as an attractive and clear layout. it will be particularly useful for students and teachers of sociology, human ecology, environmental studies, and social theory. dickens' insight won him his work the american sociological association's outstanding publication award 2006 in the environment and technology section.*
