as urban populations continue to increase it is essential to consider ways of reducing their impact in terms of the use of natural resources waste production and climate change the increasing number of people in cities requires new strategies to supply the necessary food with limited provision of land and decreasing resources this will become more challenging unless innovative solutions for growing and distributing food in urban environments are considered the scale of modern food production has created and exacerbated many vulnerabilities and the feeding of cities is now infinitely more complex as such the food system cannot be considered secure ethical or sustainable in the last few years there has been a rapid expansion in initiatives and projects exploring innovative methods and processes for sustainable food production the majority of these projects are focused on providing alternative models that shift the power back from the global food system to communities and farmers improving social cohesion health and wellbeing it is therefore not surprising that more people are looking towards urban farming initiatives as a potential solution these initiatives have demonstrated that urban agriculture has the potential to transform our living environment towards ecologically sustainable and healthy cities urban agriculture can also contribute to energy natural resources land and water savings ecological diversity and urban management cost reductions the impact urban agriculture can have on the shape and form of our cities has never been fully addressed how cities embed these new approaches and initiatives as part of new urban developments and a city regeneration strategy is critical the 2nd international conference on urban agriculture and city sustainability addressed these challenges and the search for new solutions the presented papers which form this volume detail research works looking at how urban agriculture can contribute to achieving sustainable cities

containing the papers presented at the second conference organised on island sustainability by the wessex institute of technology the book addresses the massive scale of seasonal population mobility that has such a profound effect on coastal regions and islands the problems that result from large temporary increases in population are especially serious for islands and archipelagos which have limited resources and possibilities of developing supporting infrastructures most islands cannot

provide all the resources required by a large seasonal tourist population in many cases basic requirements such as water and energy as well as agricultural produce must therefore be imported authorities need to carefully evaluate the impact of large seasonal population increases on the community and the resulting socio economic factors as well as issues related to transportation and communication all of which should be part of an overall strategy the topics covered include tourism impact and strategies community issues changing climate and environment infrastructure transport issues natural resources energy issues risk and safety waste management and island services
