*in this compilation the authors begin by describing the main impulsive behavior assessment instruments in animals and humans the following databases were searched from 2005 to 2017 medline psycinfo and bvs bireme the search retrieved four questionnaires and eight tasks for humans as well as six tasks for animals this discussion together with the analysis of instruments applied in human and non human animals is the greatest contribution to the field since there is a lack of literature about the subject in addition this chapter discusses the importance of validating such instruments for each population in the following chapter the authors propose a developmental theory of persistence in problematic alcohol consumption that emanates from impulsigenic personality traits that differentially predispose individuals to drink when highly emotional these patterns of behavior are reinforced over time and gradually shift from impulsive to compulsive first to escape negative emotions then to avoid them completely for some more adaptive methods of coping are not adequately developed these individuals may transition into early adulthood far less equipped to cope with the stress related to this developmental period and thus continue to drink in ways that are problematic and potentially harmful the following chapter focuses on adolescence a period of life wherein individuals pass through several changes including experiencing new situations and new relationships with peers parents and superiors this phase of life is also marked by physical and brain maturation the last area to develop in the central nervous system is the prefrontal cortex pfc the area also linked to the ability to control impulses this suggests that adolescents tend to have more impulsive behaviors that can result in risky behaviors such as alcohol and drugs so the purpose of this chapter is to discuss impulsivity in adolescence and clarify issues that may help us to understand topics related to this such as the difference in impulsive behaviors between genders at this stage of life and what influence socioeconomic status may have on such behaviors afterwards findings relating to emotional impulsiveness ei from the authors work and that of others are reviewed early work is first described that identified a*

neural brain wave signature of ei in personality disordered offenders detained in high security it was shown that by categorizing offenders on the basis of this brain wave measure as a priori high vs low risk and following them up following their release into the community it was possible to predict both general and violent re offending with a modest degree of accuracy continuing a review is included which summarizes the existing literature on the influence of the dimensions of impulsivity and alcohol use problems among racial ethnic groups in particular the authors focus on how chronic stress may influence the relationship between specific dimensions of impulsivity e g negative and positive urgency and alcohol use while much of the existing literature has been conducted in white samples individuals from minority backgrounds often deal with greater stress and stress specifically related to their identity as minority the authors go on to investigate the association between impulsive behaviors at age 7 and the development of problem gambling by adulthood to determine the specificity of any observed association between impulsive behaviors and problem gambling the chapter also examines the link between respondents shy depressed behaviors in childhood and later problem gambling the longitudinal investigation found prospective evidence that impulsive behaviors at age 7 are a specific and significant risk factor for later problem gambling in the concluding study a total of 318 psychiatric patients from the outpatient services of two institutions and 184 healthy subjects were recruited patients were included if they were 18 years of age met dsm iv criteria for a psychotic mood or stress related disorder and were clinically stable enough according to the treating physician to complete the study assessments healthy subjects were screened using the structured clinical interview for dsm iv scid i and were excluded if any diagnostic criteria was met or if they verbally reported a history of psychiatric disorders the goal was to determine the impact of demographic variables and substance use in the overt expression of impulsivity in men and women with and without mental disorders

this volume provides an empirical and conceptual overview of advances in our understanding of impulsivity and impulsive behaviors prominent scientists review the range of behavioral phenomena referred to as impulsive as well as the defining features and psychological neurocognitive and behavioral processes that underlie of the manifestation of impulsive behaviors focussing on progress made and the questions remaining to be answered

most of us have urges to engage in behaviors we know are not good for us from splurging on gifts we can t afford to gambling but when these urges become too much to handle we can suffer intense emotional distress putting our friendships relationships and jobs in jeopardy impulse control disorders are often difficult to recognize even for those who struggle with them but they are not uncommon now the nation s leading specialists in the field offer a powerful self help guide for the estimated 35 million sufferers and their loved ones stop me because i can t stop myself tackles the essential questions on the road to healing also included in this hopeful and encouraging book are compelling first hand stories of the authors patients and invaluable analyses of groundbreaking new treatments
