we have all witnessed media reports of the aftermath of mass victim attacks we see the carnage and we know that attackers do not show mercy victims were innocent and were targeted simply for being a part of a small or large group of people whether a bomb semi automatic weapon knife or vehicle the attacker strikes quickly and without mercy victims may have been dining in a restaurant relaxing at a bar participating in school classes attending a workplace activity or simply walking on the street because of the horrific and effective nature of such attacks we are often left fearing that little to nothing can be done if the unthinkable happens and we are caught in such a merciless attack surviving mass victim attacks presents specific and valuable strategies for survival if the unthinkable happens and serves as a practical guide to anyone who wishes to be more knowledgeable and better prepared if caught in an attack themselves gary jackson is a behavioral psychologist threat expert with operational experience who analyzes how victims have managed to survive past mass victim attacks committed by international terrorists domestic terrorists self radicalized terrorists those with mental health issues and those driven by hate and bias to present strategies that anyone can use to increase their chances of survival if the unthinkable happen throughout different types of mass victim attackers their methods how and what they target and how to use characteristics of the location to increase survival are addressed the book uses real life examples to illustrate survival the strategies presented are easily understood and do not require special skills to execute by reading surviving mass victim attacks you will be better able to know what to expect how to prepare proactively and how to respond in a way that will save your life

game theory and machine learning for cyber security move beyond the foundations of machine learning and game theory in cyber security to the latest research in this cutting edge field in game theory and machine learning for cyber security a team of expert security researchers delivers a collection of central research contributions from both machine learning and game theory applicable to cybersecurity the distinguished editors have included resources that address open research questions in game theory and machine learning applied to cyber security systems and examine the strengths and limitations of current game theoretic models for cyber security readers will explore the vulnerabilities of traditional machine learning algorithms and how they can be mitigated in an adversarial machine learning approach the book offers a comprehensive suite of solutions to a broad range of technical issues in applying game theory and machine learning to solve cyber security challenges beginning with an introduction to foundational concepts in game theory machine learning cyber security and cyber deception the editors provide readers with resources that discuss the latest in hypergames behavioral game theory adversarial machine learning generative adversarial networks and multi agent reinforcement learning readers will also enjoy a thorough introduction to game theory for cyber deception including scalable algorithms for identifying stealthy attackers in a game theoretic framework honeypot allocation over attack graphs and behavioral games for cyber deception an exploration of game theory for cyber security including actionable game theoretic adversarial intervention detection against advanced persistent threats practical discussions of adversarial machine learning for cyber security including adversarial machine learning in 5g security and machine learning driven fault injection in cyber physical systems in depth examinations of generative models for cyber security perfect for researchers students and experts in the fields of computer science and engineering game theory and machine learning for cyber security is also an indispensable resource for industry professionals military personnel researchers faculty and students with an interest in cyber security

drawn from case examples of incidents from around the world targeted violence a statistical and tactical analysis of assassinations contract killings and kidnappings is the most complete resource of information on the attack methodologies tactics used and groups responsible for targeted killings and kidnappings the author a former swat and

the working group wg 11 4 of ifip ran an inetsec conference a few times in the past sometimes together with ifip security conference sometimes as a stand alone workshop

with a program selected from peer reviewed submissions when we were elected to chair wg 11 4 we asked ourselveswhether the security and also the computer science community at large bene ts from this workshop in particular as there aremany too many securityconferences it has become di cult to keep up with the eld after having talked to many colleagues far too many to list all of them here we decided to try a di erent kind of workshop one where people would attend to discuss open research topics in our eld as typically only happens during the co ee breaks of ordinary conferences toenablethiswecalledforabstractsof2pageswheretheauthorsoutlinethe open problems that they would like to discuss at the workshop the intent being that the author would be given 15 minutes to present the topic and another 15 minutes for discussion these abstracts were then read by all members of the program committee and ranked by them according to whether they thought thiswouldleadtoaninterestingtalk and discussion we then simply selected the abstracts that got the best rankings we were happy to see this result in many really interesting talks and disc sions in the courseof the workshop ofcourse these lively anddirect discussions are almost impossible to achieve in a printed text still we asked the authors to distill the essence of these discussions into full papers the results are in your hands
