for years financial analysts have struggled with the fact that practically all the financial measures used to analyze corporate performance lack predictive power when it comes to forecasting the market performance of the company s stock numerous academic studies have documented and reported this lack of predictability correlation coefficients close to zero have been reported for the relationship between stock market performance and such critical financial measures as earnings growth sales growth price earnings ratio return on equity intrinsic value models based on discounted cash flow or dividends and many more it is this disconnect between traditional financial measures and the performance of stocks in the marketplace that has led to the now famous efficient market hypothesis the cornerstone of modern portfolio theory to accept the idea that the future performance of stocks is unpredictable is to say that nothing a company does will affect the future performance of its stock in the market and that is absurd it would be more accurate to say that everything a company does will affect the future performance of its stock in the market the problem with this statement is that it makes the forecasting of future stock performance so complex that it removes it from the realm of human solution
