study drawings play a key role in the exploration and development of architecture in the early stages of design yet these principal tools for graphic thinking have been largely taken for granted in the design professions this guide brings study drawings into the foreground by analyzing actual drawings used by architects past and present architectural study drawings is the first source to provide a basis for understanding the primary means of graphic thinking used in the creation of these drawings it also explains versatile applications of these drawings in architectural practice teaching and research evaluations of more than 80 drawings and diagrams demonstrate how study drawings are active

participants in rather than passive records of the designer s graphic thinking the author probes characteristics and properties of study drawings in addition to how graphic and cognitive processes combine to guide design decision making drawings of great past architects ranging from leonardo da vinci and le corbusier to carlo scarpa are analyzed excerpts are included from recent interviews with five contemporary architects joseph esherick helmut jahn robert stern stanley tiggerman and peter eisenman readers will learn from these masters how to enhance the value of study drawings in various design situations throughout the author clarifies how theoretical aspects of study drawings relate to actual design practice detailed chapters discuss key topics such as the theoretical structure of study drawings applications for handmade drawings how to make better use of current computer aided design cad systems examples of drafting room dialogue in practice that help improve design working processes architectural study drawings offers valuable insights that can be applied on the drawing board in the school and office in teaching of both media and design and in research and development for cad systems
