the rapidly developing field of confined polymers is reviewed in this volume special emphasis is given to polymer aspects of this interdisciplinary problem taken together the contributions offer ample evidence of how the field of polymer science continues to evolve with the passage of time the topics revolve around the tendency of surfaces to impede chain relaxation and to stimulate new sorts of chain organization these have been implicated in a variety of spectacular phenomena here is a listing of authors and affiliations k binder johannes gutenber universität mainz germany p g de gennes college de france france e p giannelis r krishnamoorti and e manias cornell university and university of houston usa g s grest exxon research and engineering co usa l leger e raphael and h hervet college de france france s q wang case western reserve university usa

this book covers the science of interfaces between an aqueous phase and a solid another liquid or a gaseous phase starting from the basic physical chemistry all the way to state of the art research developments both experimental and theoretical methods are treated thanks to the contributions of a distinguished list of authors who are all active researchers in their respective fields the properties of these interfaces are crucial for a wide variety of processes products and biological systems and functions such as the formulation of personal care and food products paints and coatings microfluidic and lab on a chip applications cell membranes and lung surfactants accordingly research and expertise on the subject are spread over a broad range of academic disciplines and industrial laboratories this

book brings together knowledge from these different places with the aim of fostering education collaborations and research progress

bahti shows how narrative or interpretive language produces historical meaning and how this meaning is reached at the expense not only of the historical facts but also of the purported intent or storyline of the narrative itself

interfacial science has rapidly expanded beyond the original realm of chemistry to include physics mechanical and chemical engineering biology materials science and other specialized subfields this book in a series from mrs emphasizes the effects of confinement on the physical and chemical properties of equilibrium and nonequilibrium systems of particular interest is the question of how nearby surfaces or ultra small geometries can force a system to behave in ways significantly different than it behaves in bulk theoretical experimental and computational evidence of the effects of confinement on gaseous liquid and solid systems is presented topics include probing confined systems structure and dynamics of liquids at interfaces nanorheology and tribology adsorption diffusion in porous systems and reaction dynamics
