comprehensive introductory survey the sun solar system stars galaxies universe cosmology quasars radio stars etc 24pp of photographs

this book shows that what we can see in the sky is just a tiny part of the universe it explains what stars are and how the billions of star clusters and

galaxies are organized like an immense spider's web

the sun and other stars shine because atoms in the star combine and release energy scientists measure the distances to stars in light years stars are the only objects in space that make their own light stars differ in size color and brightness a galaxy is a group of stars held together by gravity

most avid sky gazers wait until nightfall to catch a glimpse of the stars that are scattered across the heavens the fact of the matter is that one needs only to feel the sun's rays in order to experience the presence of a star the sun is an ordinary star a ball of hot gas much like millions of others in the universe but as the center of the solar system it is critical to the survival of all life forms on earth this comprehensive volume examines the nature of the sun and details the properties and types of various stars as well as the greater galaxies of which they are a part

covers all the basic concepts in cosmology drawing on insights from an astronomer who has pioneered much of this research over the past two decades abraham loeb starts from first principles tracing the theoretical foundations of cosmology and carefully explaining the physics behind them

this book introduces the subject of astrophysics to honours and post graduate students of physics without the necessity of their being familiar with all the practical details of modern astronomical techniques of observation and deduction of data the emphasis is on showing how an application of the commonly known laws of physics gives us important information about the properties of celestial objects and phenomena

introduces stars and galaxies discussing how they are formed the different types of galaxies how intergalactic distances are calculated the structure of the sun and the anatomy of a typical galaxy

in the last decade there has been a revolution in observational astronomy which has meant that we are very close to answering three of the four big origin questions of how the planets stars galaxies and the universe itself were formed as recently as 1995 we knew of only one planetary system our own now we know of over a hundred and this knowledge has helped to reveal how planetary systems form in this same decade new types of telescope have

allowed us to penetrate through clouds of interstellar dust to see the first moments in the life of a star and also to see directly not infer what galaxies looked like thirteen billion years ago only a billion years after the big bang because of this new knowledge we now have provisional answers to the second and third origin question the final question is the one we can't yet answer but even here there have been big steps towards an answer within the last four years astronomers have discovered that the universe is geometrically flat and that its expansion is accelerating fuelled by a mysterious dark energy this revolution in our observational knowledge of the universe including the first precise measurements of its age and matter and energy content has been vital groundwork for new ideas about its origin including the possibility that the universe originated in a larger meta universe origin questions describes at an understandable and basically non mathematical level the origin questions and the recent steps that have been taken towards answering them

this up to date volume offers student researchers an unexcelled primer on current scientific knowledge about stars this volume in the greenwood guides to the universe series provides the most up to date understanding available of the current knowledge about stars scientifically sound but written with the student in mind stars is an excellent first step for young people researching the exciting scientific discoveries that continue to extend our knowledge of the universe stars is organized thematically to help students better understand these most interesting heavenly bodies stars discusses all areas of what is known about the subject it will help student understand things such as white dwarfs neutron stars pulsars and black holes and it will answer student questions such as why do stars have different colors and how are they classified how do we know what stars are made of how did scientists figure out how stars evolved 66 illustrations glossary of star related and astronomy terms a bibliography of useful resources will guide students in learning more about the subject

the tiny specs of light we see in the sky at night called stars are actually enormous objects made of gas a very large system of stars is a galaxy with the help of this informative book readers will catch a glimpse of the many stars and galaxies that make up the universe colorful images and diagrams paired with accessible text and fact boxes will engage readers of many ages and

abilities those with curious minds will enjoy learning about this exciting aspect of space with the help of useful facts and numbers

each night millions of stars light up the dark skies galaxies throughout the universe encompass thousands of stars the appearance of stars in the sky have intrigued and enthralled humans since ancient time from constellations to the big bang theory stars and galaxies explores the complex world of astronomy and scientific discovery

adapted from the newly revised foundations of astronomy 7th edition stars and galaxies 3rd edition contains the introductory and historical astronomy chapters from foundations as well as all of the chapters on stars galaxies cosmology and the chapter on extraterrestrial life this newly revised and updated 3rd edition shows students their place in the universe not just their location but also their role as planet dwellers in an evolving universe fascinating and engaging the book illustrates how science works and how scientists depend on evidence to test hypotheses students will learn to focus on the scientific method through the strong central theme of how we know what we know through a discussion of this interplay between evidence and hypothesis seeds provides not just a series of facts but also a conceptual framework for understanding the logic of astronomical knowledge the book vividly conveys the author's love of astronomy shows students how the universe can be described by a small set of physical laws and illustrates how they can comprehend their place in the universe by understanding these laws rather than simply memorizing facts by crafting a story about astronomy seeds shows students how to ask questions of nature and therefore gradually puzzle out the beautiful secrets of the physical world the book's use of mathematics is incorporated into the body of the text as well as in separate sections for easy reference but the arguments of the text do not depend on mathematical reasoning allowing math averse students to easily follow the story the revision covers the history of astronomy elementary physics concepts stars and galaxies cosmology and the origin of life on earth and on other worlds

discover the sparkling world of stars from their beautiful births to their dramatic deaths learn about our very own star the sun as well as best friend binary star pairs and dense neutron stars gaze at gorgeous galaxies and

marvel at the milky way get answers to questions such as what's inside the sun where are the pillars of creation why do stars twinkle how fast does a pulsar spin which galaxy is a cannibal how long would it take to travel across the milky way perfect for the new curriculum this fascinating title is packed full of astounding information and number based jaw dropping facts and figures to inspire future astronauts and space scientists

provides basic information about stars galaxies nebulae pulsars black holes and theories of the origin of the universe

this text is one of two splits from seeds foundations of astronomy it contains the introductory and historical astronomy chapters from foundations as well as all the chapters on stars galaxies and cosmology plus the last chapter in foundations life on other worlds this book teaches stellar astronomy not just by presenting facts but by building a conceptual framework and then letting the facts fit into that framework it uses astronomy to show how science works and how physics prescribes the universe
