this book debunks three false claims commonly accepted by contemporary political philosophers regarding property systems that inequality is natural inevitable or incompatible with freedom that capitalism is more consistent with negative freedom than any other conceivable economic system and that the normative principles of appropriation and voluntary transfer applied in the world in which we live support a capitalist system with strong individualist and unequal private property rights the authors review the history of the use and importance of these claims in philosophy and use thorough anthropological and historical evidence to refute them they show that societies with common property systems maintaining strong equality and extensive freedom were initially nearly ubiquitous around the world and that the

our species has coexisted in the world in a healthy and balanced way for 97 of its existence it was only after our ancestors emerged from life in nature as hunter gatherers that this all began to change by the beginning of civilization some 6 000 years ago these changes rigidified and became destructive on a large scale they have accumulated to such an extent that our species now faces extinction or a dismal future of ever worsening ecocide meaninglessness and confusion have

become rampant in our postmodern era the human psyche has become utterly fragmented and rendered a stranger to reality other people and itself as dispiriting as this all seems the path forward has always been available to us if we can overcome the ignorance that prevents us from taking it we must reject the values of civilization and return to the naturalistic perspective of our ancestors where our values thinking feeling and actions are once again based on how nature and reality truly function while this approach should be evident we have until now been too terrified bewildered or arrogant to adopt it to help us succeed reality unedited provides a simple model of reality that serves as a foundation for establishing truth claims in the public sphere then we can finally take the actions necessary so our species and all life on the planet cannot only survive but thrive

around 15 000 years ago almost all humans lived in small mobile foraging bands by about 5 000 years ago the first city states had appeared this radical transformation in human society laid the foundations for the modern world we use economic logic and archaeological evidence to explain six key elements in this revolution sedentism agriculture inequality warfare cities and states in our approach the ultimate cause of these events was climate change we show how shifts in climate interacted with geography to drive technological innovation and population growth the accumulation of population at especially rich locations led to creation of group property rights over land stratification into elite and commoner classes and warfare over land among rival elites this set the stage for urbanization based on manufacturing or military defense and for elite controlled states based on taxation our closing chapter shows how these developments eventually resulted in contemporary global civilization
