this book sheds light on some of the most recent developments in monetary analysis which offer a theoretical framework for a renewed monetary approach and related policy extensions it points to recent research on what a consistent and broad scope monetary theory could be based in the twenty first century it highlights new interpretations of monetary theory as put forth by some leading economists since the eighteenth century and new developments in the analysis of current monetary issues

this book takes a detailed look at four major financial crises the twin crises of the south sea bubble in britain and the mississippi bubble in france in 1720 the great crash of 1929 and the subsequent great depression and the global financial crisis of 2007 9 it traces the evolution and causes of the crises by reference to a theory of support bargaining and money bargaining set out in earlier work but reintroduced here with specific reference to financial crises two early chapters focus on theoretical issues the work of prominent theorists including john law and j m keynes is evaluated a fundamental problem of neoclassical theory is its failure to accommodate time disparities and consequent credit requirements in economic transactions this has necessitated theoretical separation of a real economy from financial markets the separation renders neoclassical economists blind to financial services and hence to the dynamics of financial crises in support bargaining and money bargaining the real economy and financial services are seamlessly linked the book shows how the theory of support bargaining and money bargaining provides a clear and consistent explanation of the incidence of financial crises since financial crises are not exceptional events the wider aim of the book is to convince social scientists that in explaining financial crises the theory of support bargaining and money bargaining provides also a superior explanation of the functioning of economies and societies in quieter times it will appeal particularly to those many economists who find the prevalent neoclassical model of economic transactions inconsistent with the observable functioning of economies

we need a new theory of money the still dominant theory of money as taught in intro textbooks is 100 years old and for almost that long we have known that it s totally wrong the best alternative are heterodox accounts developed in the 90s and 00s these are indeed better overall descriptions of money but they remain incomplete and inadequate they rely too much on why the orthodoxy is wrong thereby incorrectly assuming there is only one alternative so called heterodoxy money has no value develops a new more subtle more sophisticated theory of money it takes more seriously than any other work to date the depth and seriousness of the fundamental claim that all money is credit money is not a thing but a marker of a social relation of credit and debt between two parties money is not value itself no form of money as money ever possesses any positive intrinsic value second the book shows that not only is all money credit but that in an important theoretical sense all credit is money to the extent any credit debt between two parties has the potential to be transferred to another party thereby functioning as money finally the book links this radical credit theory of money to today s concrete money practices this includes global capital flows national and international monetary policy and most of all the daily turnover in the money markets the book therefore develops the needed conceptual framework to ask questions like what is going on with bitcoin much less gamestop in 2021
