this is a book about how we see the environment around us its surfaces their layout and their colors and textures where we are in the environment whether or not we are moving and if we are where we are going what things are good for how to do things to thread a needle or drive an automobile or why things look as they do the basic assumption is that vision depends on the eye which is connected to the brain the author suggests that natural vision depends on the eyes in the head on a body supported by the ground the brain being only the central organ of a complete visual system when no constraints are put on the visual system people look around walk up to something interesting and move around it so as to see it from all sides and go from one vista to another that is natural vision and what this book is about

a contemporary review of podzolization is given and several taxonomic classification systems of podzols used in europe and north america are compared the taxonomic differentiae used for the separation of selected great groups and subgroups of the podzolic order in the current classification system ccc 1978 are tested against those of a new system an ecological approach to classification is adopted which accepts the contemporary concepts and definitions while redefining the subdivisions within the podzolic order the current and new classification systems are tested on 177 podzol pedons average distance cluster analysis is employed to determine the degree of similarity among profiles by using multi horizon and multi parameter data

there is a growing consensus in the human factors ergonomics community that human factors research has had little impact on significant applied problems some have suggested that the problem lies in the fact that much hfe research has been based on the wrong type of psychology an information processing view of psychology that is reductionistic and context free ecological psychology offers a viable alternative presenting a richer view of human behavior that is holistic and contextualized the papers presented in these two volumes show the conceptual impact that ecological psychology can have on hfe as well as presenting a number of specific examples illustrating the ecological approach to human machine systems it is the first collection of papers that explicitly draws a connection between these two fields while work in this area is only just beginning the evidence available suggests that taking an ecological approach to human factors ergonomics helps bridge the existing gap between basic research and applied problems
