excerpt from manual of experimental botany there is something in an experiment which appeals to the mind of the young the innate desire to find out what is in a toy how it works and why various things happen is largely responsible for this chemistry and physics owe their great popularity to the fact that they have been taught by experiment zoology and botany have always been less popular because they have often been taught without experimentation in the days when morphology was the summum bonum of botanical study there could be small room for experiment but in these later years when the science has been taught more along physiological lines the use of experiment has come into more general vogue it is the purpose of this little book to teach botany by experiment plants yield themselves very readily to experiment being alive they respond to all external influences most admirably and there is no reason why such work with plants should not prove as interesting and as useful as similar exercises with levers lenses vibrating pendulums and cords it is hoped that something may be found in this book which will remedy the inadequacy which exists in the laboratory instruction of many schools the work is not entirely physiological in character but it has been thought wise to present the morphological part also in the form of experiments about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

the general purpose with which this book has been written is sufficiently indicated by its title i have selected a number of the classical experiments of experimental psychology and have tried to present them in such a way that their performance shall have a real disciplinary value for the undergraduate student within this general purpose my aim has been two fold i have sought to show in the first place that psychology is above the laboratory that we employ our instruments of precision not for their own sake but solely because they help us to a refined and more accurate introspection and secondly just as in my outline of psychology and primer of psychology i gave the results of experimentation a prominent place in the psychological system so here i have treated the selected experiments not as separate exercises but as points of departure for systematic discussion psycinfo database record c 2005 apa all rights reserved

excerpt from experimental psychology a manual of laboratory practice on the average we can still hear a tone of so and so many vibrations on the average we can distinguish two weights if they differ by such and such an amount the question which the quantitative experiment answers is therefore some variant of the question how much notice however that this is not the question asked of consciousness that question is always the one or other of the two just mentioned present or absent and same or different here then is a second difference between the qualitative and the quantitative experiment the former aiming at description comes to an end when introspection has made its report the latter aiming at measurement subjects the results of introspection to mathematical treatment the experiments are complementary each sacrificing something and each gaining something the qualitative experiment shows us all the detail and variety of the mental life and in so doing forbids us to pack its results into formulas the quantitative experiment furnishes us with certain uniformities of the mental life neatly and summarily expressed but for that very reason must pass unnoticed many things that a qualitatively directed introspection would bring to light the quantitative experiment in practice in general the rules for the conduct of a quantitative experiment are the same as those for a qualitative experiment vol i xiii f there are however in practice certain well marked differences between the two types of experiment 1 in the first place the quantitative experiment demands much more outside preparatory work than does the qualitative most if not all of the reading done in preparation for the experiments of vol i could be done within the laboratory this is not the case with the experiments that you are now to perform the quantitative experiment sums up in a single representative value the results of a large number of observations it is clear then that the conditions of observation must be the same throughout otherwise the results will not be comparable about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
