excerpt from the science of society this book was first printed nearly forty years ago its seed for the most part fell upon stony ground in consequence of this cold reception this lack of demand the work passed through but a few small editions and then disappeared from the market the author s keen broad and untiring mind leading him into new fields of thought he never reprinted it thus for more than a quarter of a century it has been practically out of sight out of mind nevertheless its work has never stopped here and there the seed did fall upon oases and in fertile spots it always took deep root and reproduced its kind its children and grand children and great grand children have seldom been conscious of their ancestry but today the family is so numerous that the branches of its genealogical tree pervade with a growing and often a controlling influence every department of what mr andrews happily calls man s social habitat it can be only helpful to this family to be made acquainted with its origin especially when the power of the printing press enables it to revive and freshly scatter the parent seed upon a more receptive soil such is the purpose of this new edition of the science of society the social problem is pressing more closely upon our heels than it was in 1851 and a book expounding as lucidly as this the basic principles in which alone its solution is to be found is greatly needed the author himself in the closing years of his life earnestly desired its republication and the publisher takes pleasure in the thought that the enterprise would meet his approbation and not only his but that of josiah warren as well who was never tired of praising mr andrews s work as in his opinion the soundest exposition that ever had been made or ever could be made of the two principles which he mr warren had introduced to the world in his less pretentious work true civilization but even if this double incentive of satisfying a public demand and honoring a master s memory were altogether lacking the publisher might still find abundant justification and encouragement in robert browning s lines to shoot a beam into the dark assists to make that beam do fuller service spread and utilize such bounty to the height that assists also and that work is mine about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at [forgottenbooks.com](http://forgottenbooks.com) this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

are we alone in the universe as humans are we unique or are we part of a greater cosmic existence what is life s future on earth and beyond how does life begin and develop these are age old questions that have inspired wonder and controversy ever since the first people looked up into the sky with today s technology however we are closer than ever to finding the answers astrobiology is the relatively new but fast growing scientific discipline that involves trying to understand the origin evolution and distribution of life within the universe it is also one of the few scientific disciplines that attracts the public s intense curiosity and attention this interest stems largely from the deep personal meaning that the possible existence of extraterrestrial life has for so many whether this meaning relates to addressing the big questions of our existence the possibility of encountering life on

other planets or the potential impact on our understanding of religion there is no doubt that the public is firmly vested in finding answers in this broadly accessible introduction to the field. Bruce Jakosky looks at the search for life in the universe not only from a scientific perspective but also from a distinctly social one. In lucid and engaging prose he addresses topics including the contradiction between the public's fascination and the meager dialogue that exists between those within the scientific community and those outside of it and what has become some of the most impassioned political wrangling ever seen in government science funding.
