the papers in this volume examine the recent revolutionary discoveries in cosmology and astronomy and their theoretical interpretation the observational evidence for an accelerating universe and an earlier decelerating phase is brought up to date with the newest results for the most distant and oldest type ia supernovae the data from the wmap satellite provide for the first time true precision cosmology reliable results for the age of the

universe its geometry its evolution over the past 13.7 billion years and many other features including the proportions of ordinary matter dark matter and dark energy other papers in this volume describe the information obtained with 21st century astronomical techniques including gravitational lensing studies across the electromagnetic spectrum with ground based and nasa observatories and surveys of millions of galaxies the results are interpreted by leading theorists using both accepted and exotic theories including inflation and superstring theory

three of the most exciting areas of current fundamental research in physics are neutrino physics flavor physics and precision cosmology despite the remarkable success of the standard model of the electromagnetic and weak interactions on many fronts there remain many unanswered questions related to important experimental observations in the areas mentioned following the trend of the previous workshops the focus on this one is also the presentation of the current status of the main neutrino mass experiments the future experimental projects related to them as well as reviews of the theoretical and phenomenological ideas related to the question of neutrino masses cp violation and related topics in cosmology such as the origin of the dark matter and dark energy and the inflationary theory of the early universe

the proceedings from the 12th brazilian school of cosmology and gravitation offer an up to date series of lectures covering issues at the forefront of cosmology gravitation and astrophysics of particular note are the interesting results presented by belinski regarding the absence of black hole evaporation in addition riffini offers an insightful article you ll want to read that explores the origin of gamma 0 ray bursts

cosmology has dramatically evolved during the last decade and there has been vast development of e g theories of galaxy formation in connection with the early universe or gravitational lensing these new developments motivated the editors to organize a school covering all of these ideas and observations in a pedagogical way the topics covered in the 26 lectures of this summer school include qso absorption systems identification of objects at high redshift radiogalaxies galaxy formation and evolution galaxy number counts clustering theories of structure formation large scale structure and streaming motions gravitational lensing and spectrum and anisotropies of the cosmic microwave background radiation observational developments data analysis and theoretical aspects are equally treated
