savants are people who are mentally and often physically impaired but who have one dazzling talent cases of savants like christopher who is described here are not unheard of but have never been reported before despite being unable to look after himself because he has difficulty with everyday tasks christopher can read write translate and communicate in fifteen to twenty different languages in this original detailed and wide ranging study neil smith and ianthi maria tsimpli not only provide insight into the mind of one unique individual but simultaneously cast light on the nature of language and thought in general by exploiting recent developments in both linguistics and psychology the authors have made an essential contribution to the whole field of cognitive science

one of the central problems in the study of modern cognition is the degree to which higher cognition is modularized that is how much are higher functions carried out by domain specific specialized cognitive subsystems rather than a highly general cognitive learning and inferring device to date ideas and proposals about modularity have been best developed in the study of vision and grammar in the present volume the usefulness of approaches employing modularity and domain specificity are further explored in papers on the development of biological thought word meaning symbols and emotional development as well as in the core area of grammar itself by leading researchers in these fields the volume also contains an introduction to some basic ideas and concepts in the study of modularity and domain specificity and some critical discussion of the overall problems of the modularity constraints approach to analyzing development

the third edition of this popular text continues its in depth practical coverage with a focus on learning and instruction that presents the latest psychological and

educational models and research to the students of today's learning society psychology of learning for instruction third edition focuses on the applications and implications of the learning theories using excellent examples ranging from primary school instruction to corporate training this text combines the latest thinking and research to give students the opportunity to explore the individual theories as viewed by the experts students are encouraged to apply reflective practice which is designed to foster a critical and reflective mode of thinking when considering any particular approach to learning and instruction

what is assessed gets attention what is not assessed does not when higher education is expected to promote complex achievements in subject disciplines and in terms of employability problems arise how are such achievements to be assessed in the first part knight and yorke argue that existing grading practices cannot cope with the expectations laid upon them while the potential of formative assessment for the support of learning is not fully realised improving the effectiveness of assessment depends they claim on a well grounded appreciation of what assessment is and what may and may not be expected of it the second part is about summative judgements for high stakes purposes using established measurement theory a view is developed of the conditions under which affordable useful valid and reliable summative judgements can be made a conclusion is that many complex achievements resist high stakes assessment which directs attention to low stakes essentially formative alternatives assessment for learning and employability demands more than module level changes to assessment methods the final part discusses how institutions need to respond in policy terms to the challenges that have been posed this book has wide and practical relevance to teachers module and programme leaders higher education managers and quality enhancement specialists

this volume contains a selection of papers presented at the 1993 annual conference of the association of educational and training technology the contributors address fundamental issues in course design policy and practice particularly with regard to the efficiency of new systems

this is the third in a series of conferences devoted primarily to the theory and applications of artificial neural networks and genetic algorithms the first such event was held in innsbruck austria in april 1993 the second in ales france in april 1995 we are pleased to host the 1997 event in the mediaeval city of norwich england and to carry on the fine tradition set by its predecessors of providing a relaxed and stimulating environment for both established and emerging researchers working in these and other related fields this series of conferences is unique in recognising the relation between the two main themes of artificial neural networks and genetic algorithms each having its origin in a natural process fundamental to life on earth and each now well established as a paradigm fundamental to continuing technological development through the solution of complex industrial commercial and financial problems this is well illustrated in this volume by the numerous applications of both paradigms to new and challenging problems the third key theme of the series therefore is the integration of both technologies either through the use of the genetic algorithm to construct the most effective network architecture for the problem in hand or more recently the use of neural networks as approximate fitness functions for a genetic algorithm searching for good solutions in an incomplete solution space i.e. one for which the fitness is not easily established for every possible solution instance

herbert a simon has been a leading contributor to cognitive psychology computer science public administration philosophy and statistics and is the winner of the 1978 nobel memorial prize in economics as this authoritative collection demonstrates his impact on economics has been felt in areas as diverse as the theory of the firm and economic organization consumer behaviour law and economics and environmental economics central to his work is the notion of bounded rationality the mismatch between human decision making capacities and the scale of the decision problems that people face which results in satisficing rather than optimising behaviour and his belief that economic research should start from the study of actual behaviour rather than being based on convenient but unrealistic assumptions peter earl s choice of articles shows both the kind of economics that emerges when simon s philosophy is followed comprehensively and what happens when neo classical economists partially
