this volume recording the 10th international symposium honoring noted french mathematical physicist jean pierre vigier surveys and continues to develop unified field mechanics ufm from the perspective of multiverse cosmology and topological field theory ufm represents a developing paradigm shift with many new parameters extending the standard model to a 3rd regime of natural science beyond quantum mechanics ufm is now experimentally testable thus putatively able to demonstrate the existence of large scale additional dimensionality lxd test for qed violating phenomena and surmount the quantum uncertainty principle leading to a new age of discovery palling all prior ages in the historical progression classical mechanics 3d to quantum mechanics 4d and now to the birth of the 3rd regime of ufm in additional dimensionality correlating with m theory many still consider the planck scale as the basement of reality this could only be considered true under the limitations of the standard model as we methodically enter the new regime a profound understanding of the multiverse and additional dimensionality beckons

in this novel academic study aled thomas analyses modern issues surrounding boundaries and fluidity in contemporary scientology by using the scientologist practice of auditing as a case study this book explores the ways in which new types of scientologies can emerge the notion of free zone scientology is characterised by its horizontal structure in contrast to the vertical hierarchy of the institutional church of scientology with this in mind thomas explores the free zone as an example of a developing and fluid religion directly addressing questions concerning authority leadership and material objects this book by maintaining a double focus on the top down hierarchy of the church of scientology and the horizontal fluid nature of the free zone

breaks away from previous research on new religions which have tended to focus either on new religions as indices of broad social processes such as secularization or globalization or as exemplars of exotic processes such as charismatic authority and brainwashing instead thomas adopts auditing as a method of providing an in depth case study of a new religion in transition and transformation in the 21st century this opens the study of contemporary and new religions to a series of new questions around hybrid religions sacred and secular and acts as a framework for the study of similar movements formed in recent decades

this book develops a binary role theory of world politics extending from the micro analysis of foreign policy to the macro analysis of world politics the effort employs analytical tools outside of role theory to extend role concepts from agents spatially to finitely generated systems and temporally to different phases and sequences of social interaction between pairs of agents as ego and alter there is an initial emphasis on thinking small about the interactions of agents as the building blocks of world politics and then tracing the processes of aggregation that generate the emergence and evolution of larger patterns of international relations over time empirical case studies from different historical eras and geographical regions illustrate the application of binary role theory models to problems of conflict management alliance formation diplomatic engagement and transitions in world order the analysis employs complex adaptive systems cas analysis to go beyond the study of political science in building bridges to the natural sciences by using concepts and models from the standard model in physics and the modern synthesis in biology this book will interest an audience of foreign policy scholars and international relations theorists as well as students of quantum and computational models of world politics

quantum physics in contrast to classical physics allows non locality and indeterminism in nature moreover the role of the observer seems indispensable in quantum physics in fact quantum physics unlike classical physics suggests a metaphysics that is not physicalism which is today s official metaphysical doctrine as is well known physicalism implies a reductive position in the philosophy of mind specifically in its two core areas the philosophy of consciousness and the philosophy of action quantum physics in contrast is compatible with psychological non reductionism and actually seems to support it the essays in this book explore from various points of view the possibilities of basing a non reductive philosophy of mind on quantum physics in doing so they not only engage with the ontological and epistemological aspects of the question but also with the neurophysiological ones
