1 new york times bestseller with unequaled insight and brio new york times columnist david brooks has long explored and explained the way we live now brooks turns to the building blocks of human flourishing in a multilayered profoundly illuminating work grounded in everyday life this is the story of how success happens told through the lives of one composite american couple harold and erica drawing on a wealth of current research from numerous disciplines brooks takes harold and erica from infancy to old age illustrating a fundamental new understanding of human nature along the way the unconscious mind it turns out is not a dark vestigial place but a creative one where most of the brain s work gets done this is the realm where character is formed and where our most important life decisions are made the natural habitat of the social animal brooks reveals the deeply social aspect of our minds and exposes the bias in modern culture that overemphasizes rationalism individualism and iq he demolishes conventional definitions of success and looks toward a culture based on trust and humility the social animal is a moving intellectual adventure a story of achievement and a defense of progress it is an essential book for our time one that will have broad social impact and will change the way we see ourselves and the world

this is the happiest story you will ever read it s about two people who led wonderfully fulfilling successful lives the

odd thing was they weren't born geniuses they had no extraordinary physical or mental gifts nobody would have picked them out at a young age and said they were destined for greatness how did they do it

this book offers a philosophical analysis of what it is to be a human being in all her aspects it analyses what is meant by the self and the i and how this feeling of a self or an i is connected to the brain it studies specific cases of brain disorders based on the idea that in order to understand the common one has to study the specific the book shows how the self is thought of as a three fold emergent self comprising a relationship between an objective neural segment a subjective neural segment and a subjective transcendent segment it explains that the self in the world tackles philosophical problems such as the problem of free will the problem of evil the problem of human uniqueness and empathy it demonstrates how the problem of time also has its place here for many people the world includes ultimate reality hence the book provides an analysis and evaluation of different relationships between human beings and ultimate reality god the book presents an answer to the philosophical problem of how one could understand divine action in the world

in social animals perturbations may trigger specific behavioural responses with consequences for dispersal and complex population dynamics perturbations raise the need for information gathering in order to reduce uncertainty and increase resilience updated information is then shared within the group and social behaviours emerge as a self organized process this social information factorizes with the size of the group and it is finally used for making crucial decisions about for instance when to leave the patch and where to go indeed evolution has favoured philopatry over dispersal and this trade off is challenged by perturbations when perturbations accumulate over time they may decrease the suitability of the patch and erode the philopatric state until crossing a tipping point beyond which most individuals decide to disperse to better areas initially the decision to disperse is led by a few individuals

and this decision is copied by the rest of the group in an autocatalytic way this feedback process of social copying is termed runaway dispersal furthermore social copying enhances the evolution of cultural and technological innovation which may cause additional nonlinearities for population dynamics social information gathering and social copying have also occurred in human evolution especially after perturbations such as climate extremes and warfare in summary social feedback processes cause nonlinear population dynamics including hysteresis and critical transitions from philopatry to patch collapses and invasions which emerge from the collective behaviour of large ensembles of individuals

the social animal is a classic investigation of human beings as social animals
