combining the studies of modern film traditional narratology and roman art this interdisciplinary work explores the complex and highly visual techniques of tacitus annales the volume opens with a discussion of current research in narratology as applied to roman historians narratology is a helpful and insightful tool but is often inadequate to deal with specifically visual aspects of ancient narrative in order to illuminate tacitus techniques and to make them speak to modern readers this book focuses on drawing and illustrating parallels between tacitus historiographical methods and modern film effects building on these premises waddell examines a wide array of tacitus visual

narrative devices tacitean examples are discussed in light of their narrative effect and purpose in the annales as well as the ways in which they are similar to contemporary roman art and modern film techniques including focalization alignment use of the ambiguous gaze temporal suggestion and quick cutting through this approach the modern scholar gains a deeper understanding of the many ways in which tacitus annales act upon the reader and how his narrative technique helps to shape guide and deeply layer his history

contrasting conditions with and without conscious experience has served consciousness research well however research based on this simple contrast has led to controversies about the neural basis of conscious experience one key reason for these ongoing debates seems to be that the simple contrast between conditions with and without consciousness is not specific for unraveling the neural basis of conscious experience but rather also leads to other processes that precede or follow it acknowledging this methodological problem implies that some of the previous research findings about the neural underpinnings of conscious experience are actually reflecting the prerequisites and consequences rather than the direct correlates of conscious perception thus it is required to re evaluate the previous results to find out which of them are telling us anything about the neural basis of consciousness but first and foremost to overcome this methodological problem we need new experimental paradigms that go beyond the simple contrastive analysis or find the ways how some older but well forgotten paradigms may foster a new look at this emerging problem accordingly this research topic is looking for empirical and theoretical contributions that 1 envision new and suitable experimental approaches to study consciousness that are free from the limitations of the simple contrastive analysis 2 provide empirical data that help to separate the neural correlates of conscious experience from the prerequisites and consequences of it 3 help to re assess previous research findings about the neural correlates of conscious perception in the light of the methodological problems with the traditional contrastive analysis we hope that the theoretical insights and experimental approaches collected within this research topic help us to gain a

more refined understanding of the neural basis of conscious experience
