about darwin's views on human origins and race contrary to the beliefs of most academicians and educated readers darwin had two dangerous ideas instead of one daniel dennett was perfectly right about the first which was the notion that natural selection operated in a way that precluded explanatory intrusions from outside the natural world in other words metaphysics has no place in biological explanation things spiritual like vitalism and finalism are simply inapplicable to evolutionary biology the second idea is rarely mentioned in politically correct america that the human races are different in sometimes significant ways indeed inequality is a normal condition of nature darwin's clash with christianity is winding down because modern science is a foundation of western culture and it fully accepts the truth of natural selection and the evolution of life including man it is ironic that as the struggle with christianity declines a new struggle emerges the battle over racial differences liberalism evolved into radical egalitarianism as it swept over america creating an authoritarian political correctness that contradicts our constitution modern genetics now threatens the liberal myth of human equality these darwinian conflicts are playing out amidst our culture wars a battle that could transform us into another brazil radical egalitarianism and multiculturalism are ideologies aimed at dismantling our great anglo european tradition forces of erosion are at work which may make our nation's greatness a faint memory the battle with creationism is essentially over in europe and it is winding down in the u s science always wins fights over the facts of nature eddies of ignorance will persist in american society where fundamentalism exists but educated elites have long since agreed with darwin liberal relativism erodes our standards of excellence and even undermines our christian morality a morality that seems closely connected to our moral instinct with their power in academia liberals will submit to white guilt as they treat blacks as eternal victims distorting reality to make outcomes equal darwin however may be vindicated on the matter of real racial differences causing agony among idealistic liberals who must relinquish their lofty dreams scientific humanism has always touted critical thinking as a supreme goal of education but it is threatened by the irrational side of liberalism that savors post modern subjectivism today we see diversity training imposed on young people in a stalinist manner propaganda and groupthink are current weapons of the pc martinets in reading this survey of how darwin came to his dangerous ideas you may appreciate how important science and critical thinking are in a society gripped by wayward versions of liberalism both evolution by natural selection and racial differences are discussed in this book in order to illumine darwin's two dangerous ideas one that threatened christianity and one that now threatens liberal humanism's egalitarian dream social scientists will be exposed as propagandists for radical egalitarianism rather than as true scientists the movement to eliminate the word race is evidence of political motivation rather than scientific honesty to examine the conflicts related to darwinism the book includes a brief treatment of darwin's life and works the battle against creationism the case

against supernaturalism a brief survey of human evolution and a review of current issues bearing upon human nature and race open debate over this book will be a healthy antidote for the fearful silence in america i hope you engage in this debate and send me any comments or criticisms at njtjrt aol com

should a species smart enough to foresee its own demise be able to consciously evolve in order to overcome threats to its existence evolve reveals the nexus of evolutionary biology sustainability and peace on the journey to pacem 2050 there is a burning platform threatening our species although our species is extremely good at cooperation social polarization is preventing our citizenry from being in adequate alignment to adopt the necessary public policy to mitigate future ecological disaster there are only three scenarios going forward extinction eusocial evolution or a long term cultural intervention to overcome our current lack of conceptual understanding lack of social empathy and lack of decision making to implement the solutions needed to mitigate catastrophe no single government action no corporate solutions or temporary changes in citizen behavior will resolve the challenges we face the problems are interconnected and the path to find solutions represents the solution itself a principle of evolution and of social change is that only the system can change the system pacem 2050 is the uncharacteristic social change strategy that changes the structure of how we share the realities of sustainability social polarization and approaching ecological tipping points
