this classic is one of the most cited and novel approaches to psychology ever written hans eysenck presents a descriptive and causal model of human personality in accord with the major concepts of experimental psychology and the physiological and neurological mechanisms that form the biological basis of behavior patterns his proposal for an alliance between personality and physiology represented a major innovation in the field of psychology distinguished his research from his contemporaries and set the stage for a wealth of research to come before this foundational work eysenck had initially constructed a model of personality in such works as dimensions of personality and the experimental study of personality but these were primarily descriptive in nature a second phase of research included his dynamics of anxiety and hysteria and experiments with drugs where he provided causal analysis by reference to concepts then current in experimental psychology the biological basis of personality represents eysenck s third phase when he dug deeper to find biological causes underlying the psychological concepts of emotion excitation and inhibition which had formed the building blocks of his earlier efforts in this work the causal links he postulates between personality variables and neurological and physiological discoveries establish a realistic model that takes theory out of the field of mere speculation as sybil eysenck makes clear in her new preface this book paved the way for a marriage of the experimental and individual difference approach in personality psychology as sybil eysenck makes clear in her new preface this book paved the way for a marriage of the experimental and individual difference approach in personality psychology

an outcome of the 1930 series of lane medical lectures at stanford university to develop the completed personality a long series of interactions between the original basis and the surrounding environment is essential a discussion of the effects on developing personalities of uniting entire individuals and of transplanting organs and parts leads to a convincing demonstration of the high improbability of the inheritance of acquired characters from the

chapter on exaggerated deviations from racial types in which the author treats of dwarfs and giants we are led into a section on deviations in structural types among various breeds of dogs the closing chapters treat mainly of the two normal adult types the dolichocephalic linear long headed and the brachycephalic lateral short headed their characteristics geographic distribution and age modifications a brief section is devoted to the sex glands senility and rejuvenation the author demonstrating that the sex gland rejuvenation idea is based upon an entirely erroneous conception man's deviation from his nearest animal relatives namely intellectual achievement has probably been initiated by two evolutionary changes 1 some mutation which has resulted in the retention of head proportions comparable to those found in the fetal stages of the higher mammals this gives a disproportionately large cranium and big brain with small facial region as compared to the reverse adult proportions among other mammals 2 a germinal mutation resulting in an exaggerated prolongation of childhood and the stages of immaturity to more than twenty years thus extending enormously the learning period of man there are considerable experimental material over seventy figures and a bibliography of 260 titles

differences between people are a fascinating and long standing area of psychological inquiry however previous research has largely been confined to studies at the descriptive level this book tries to explain individual difference rather than merely describe them explanations are derived from two major competing frameworks the biological and social approaches to individuality the book is based on the contributions of specialists from europe and north america invited to represent the biological and social points of view thus a direct confrontation is obtained of two approaches that hitherto have proceeded with virtually no reference to each other attention is paid to behavior genetics psychophysiology and temperament as well as to social learning behavioral strategies and person environment interactions differences and commonalities between the biological and social approaches are scrutinized and a common framework is outlined to stimulate future research due to its innovative character the book is particularly relevant for investigators in the field in addition it may be fruitfully used in advanced graduate level courses in personality

psychology

psychiatry has emerged as a burgeoning scientific field with major advances in etiology and treatment of several disorders just as there was excitement in the anatomic advances that took place a hundred years ago when emil kraepelin and his collaborators took on the enormous task of classification of psychiatric disorders based on rational scientific thinking new advances in genetics biochemistry neuroanatomy and pharmacotherapy of mental disorders have brought us even closer to a better understanding of complex disorders like schizophrenia bipolar disorder depression and even autism the major goal of the previous edition of this classic book was to update the busy clinician psychiatric resident and medical student with the most up to date information on etiology diagnosis and treatment of psychiatric disorders this goal remains the focus of the third edition of this book in this updated and expanded edition the reader is provided with the most contemporary information and literature supported by a close survey of the field several new chapters dealing with new concepts in biology and treatment of mental disorders have been added this new edition of this classic title with its focus on biologic and medical aspects of psychiatry will continue to be of significant help to all interested in the scientific practice of psychiatry

a choice magazine outstanding academic title of 2018 a novel approach to understanding personality based on evidence that we share more than we realize with other mammals this book presents the wealth of scientific evidence that our personality emerges from evolved primary emotions shared by all mammals yes your dog feels love and many other things too these subcortically generated emotions bias our actions alter our perceptions guide our learning provide the basis for our thoughts and memories and become regulated over the course of our lives understanding personality development from the perspective of mammals is a groundbreaking approach and one that sheds new light on the ways in which we as humans

respond to life events both good and bad jaak panksepp famous for discovering laughter in rats and for creating the field of affective neuroscience died in april 2017 this book forms part of his lasting legacy and impact on a wide range of scientific and humanistic disciplines it will be essential reading for anyone trying to understand how we act in the world and the world s impact on us

with more than three times as many defined entries biographies illustrations and appendices than any other dictionary of psychology ever printed in the english language raymond corsini s dictionary of psychology is indeed a landmark resource the most comprehensive up to date reference of its kind the dictionary also maintains a user friendliness throughout this combination ensures that it will serve as the definitive work for years to come with a clear and functional design and highly readable style the dictionary offers over 30 000 entries including interdisciplinary terms and contemporary slang more than 125 illustrations as well as extensive cross referencing of entries ten supportive appendices such as the greek alphabet medical prescription terms and biographies of more than 1 000 deceased contributors to psychology further augment the dictionary s usefulness over 100 psychologists as well as numerous physicians participated as consulting editors and a dozen specialist consulting editors reviewed the material dr alan auerbach the american psychological association s de facto dictionary expert served as the senior consulting editor as a final check for comprehensiveness and accuracy independent review editors were employed to re examine re review and re approve every entry

the textbook builds a bridge between the neurosciences theoretical and experimental neurobiology neurology and the psychosciences psychology psychiatry psychotherapy and aims to help provide the other disciplines with the most important and scientifically validated knowledge in an understandable form the question of how mental experience and brain processes relate to each other has long been considered mysterious in this book you will learn based on the latest scientific findings that the two areas form an indissoluble unity even if we experience and study them differently we present this unity in concrete terms in

psychological neurobiological theory and psychiatric psychotherapeutic practice we treat the principles of neurobiological excitation and information processing the structure and function of the limbic system the development of the personality and the interaction of genetic epigenetic factors and prenatal and postnatal environmental influences which may be favourable or unfavourable on this basis the exemplary presentation of important mental disorders such as addictive disorders schizophrenic disorders affective disorders and anxiety disorders takes place finally following in the footsteps of the eminent psychotherapist klaus grawe the concept of neuropsychotherapy is introduced and it is shown why psychotherapy and neurobiology belong together and can enrich each other our psychoneuroscientific approach paints a picture of man that is not based on opposites but on an integration of psyche brain behavior and experience

psychology theme in a set of three volumes is one of a number of many theme subjects covered by the encyclopedia of biological physiological and health sciences a component of the global encyclopedia of life support systems eolss which is an integrated compendium of twenty such component encyclopedias the three volume set is organized in seven main areas that try to cover essential information about such this wide and complex field of human knowledge from its neurobiological correlates to the study of how the human mind imagines and how it produces symbols that guide human behavior to the most advanced clinical interventions within the psychotherapeutic realm these three volumes are aimed at the following five major target audiences university and college students educators professional practitioners research personnel and policy analysts managers and decision makers and ngos
