this updated and revised second edition of the leading reference volume on distance metrics includes a wealth of new material that reflects advances in a developing field now regarded as an essential tool in many areas of pure and applied mathematics its publication coincides with intensifying research efforts into metric spaces and especially distance design for applications accurate metrics have become a crucial goal in computational biology image analysis speech recognition and information retrieval the content focuses on providing academics with an invaluable comprehensive listing of the main available distances as well as standalone introductions and definitions the encyclopedia facilitates swift cross referencing with easily navigable bold faced textual links to core entries and includes a wealth of fascinating curiosities that enable non specialists to deploy research tools previously viewed as arcane its value added context is certain to open novel avenues of research

papers from a flagship robotics conference that cover topics ranging from kinematics to human robot interaction and robot perception robotics science and systems vi spans a wide spectrum of robotics bringing together researchers working on the foundations of robotics robotics applications and the analysis of robotics systems this volume presents the proceedings of the sixth robotics science and systems conference held in 2010 at the university of zaragoza spain the papers presented cover a wide range of topics in robotics spanning mechanisms kinematics dynamics and control human robot interaction and human centered systems distributed systems mobile systems and mobility manipulation field robotics medical robotics biological robotics robot perception and estimation and learning in robotic systems the conference and its proceedings reflect not only the tremendous growth of robotics as a discipline but also the desire in the robotics community for a flagship event at which the best of the research in the field can be presented

this volume contains papers selected for presentation at the 6th iapr workshop on document analysis systems das 2004 held during september 8 10 2004 at the university of florence italy several papers represent the state of the art in a broad range of traditional topics such as layout analysis applications to graphics recognition and handwritten documents other contributions address the description of complete working systems which is one of the strengths of this workshop some papers extend the application domains to other media like the processing of internet documents the peculiarity of this 6th workshop was the large number of papers related to digital libraries and to the processing of historical documents a taste which frequently requires the analysis of color documents a total of 17 papers are associated with these topics whereas two years ago in das 2002 only a couple of papers dealt with these problems in our view there are three main reasons for this new wave in the das

community from the scientific point of view several research fields reached a thorough knowledge of techniques and problems that can be effectively solved and this expertise can now be applied to new domains another incentive has been provided by several research projects funded by the ec and the nsf on topics related to digital libraries

synesthesia is a condition in which a stimulus elicits an additional subjective experience for example the letter e printed in black the inducer may trigger an additional colour experience as a concurrent e g blue synesthesia tends to run in families and thus a genetic component is likely however given that the stimuli that typically induce synesthesia are cultural artefacts a learning component must also be involved moreover there is evidence that synesthetic experiences not only activate brain areas typically involved in processing sensory input of the concurrent modality synesthesia seems to cause a structural

reorganisation of the brain attempts to train non synaesthetes with synaesthetic associations have been successful in mimicking certain behavioural aspects and posthypnotic induction of synaesthetic experiences in non synaesthetes has even led to the according phenomenological reports these latter findings suggest that structural brain reorganization may not be a critical precondition but rather a consequence of the sustained coupling of inducers and concurrents interestingly synaesthetes seem to be able to easily transfer synaesthetic experiences to novel stimuli beyond this certain drugs e g lsd can lead to synaesthesia like experiences and may provide additional insights into the neurobiological basis of the condition furthermore brain damage can both lead to a sudden presence of synaesthetic experiences in previously non synaesthetic individuals and a sudden absence of synaesthesia in previously synaesthetic individuals moreover enduring sensory substitution has been effective in inducing a kind of acquired synaesthesia besides informing us about the cognitive mechanisms of synaesthesia synaesthesia research is relevant for more general questions for example about consciousness such as the binding problem about crossmodal correspondences and about how individual differences in perceiving and experiencing the world develop hence the aim of the current research topic is to provide novel insights into the development of synaesthesia both in its genuine and acquired form we welcome novel experimental work and theoretical contributions e g review and opinion articles focussing on factors such as brain maturation learning training hypnosis drugs sensory substitution and brain damage and their relation to the development of any form of synaesthesia
