the black book of quantum chromodynamics is an in depth introduction to the particle physics of current and future experiments at particle accelerators the book offers the reader an overview of practically all aspects of the strong interaction necessary to understand and appreciate modern particle phenomenology at the energy frontier it assumes a working knowledge of quantum field theory at the level of introductory textbooks used for advanced undergraduate or in standard postgraduate lectures the book expands this knowledge with an intuitive understanding of relevant physical concepts an introduction to modern techniques and their application to the phenomenology of the strong interaction at the highest energies aimed at graduate students and researchers it also serves as a comprehensive reference for lhc experimenters and theorists this book offers an exhaustive presentation of the technologies developed and used by practitioners in the field of fixed order perturbation theory and an overview of results relevant for the ongoing research programme at the lhc it includes an in depth description of various analytic resummation techniques which form the basis for our understanding of the qcd radiation pattern and how strong production processes manifest themselves in data and a concise discussion of numerical resummation through parton showers

which form the basis of event generators for the simulation of lhc physics and their matching and merging with fixed order matrix elements it also gives a detailed presentation of the physics behind the parton distribution functions which are a necessary ingredient for every calculation relevant for physics at hadron colliders such as the lhc and an introduction to non perturbative aspects of the strong interaction including inclusive observables such as total and elastic cross sections and non trivial effects such as multiple parton interactions and hadronization the book concludes with a useful overview contextualising data from previous experiments such as the tevatron and the run i of the lhc which have shaped our understanding of qcd at hadron colliders

this collection of essays offers new and deeper perspectives on a relatively little studied manuscript of the greek psalter at the biblioteca apostolica vaticana codex vaticanus graecus 752 as the title suggests the perspective of the editors is an interdisciplinary one thus the volume covers three broad areas the material aspects concerning the manuscript the textual contents consisting of psalms and their catena commentary and the over two hundred images that illustrate the psalms barbara crostini has been mainly responsible for parts i ii and glenn peers for part iii and the writing of this introduction follows this basic division of tasks ultimately however the editors would like to see these parts not as divided but as mutually integrated each providing clues to the major unresolved issues of provenance and production of this codex thus it is capturing the complexity of the interrelationship between these elements in the creation and use of the manuscript that remains our ideal aim consider vat gr 752 as a particular edition of the sacred page as such it came about and first lived in a specific context grasping this reality
