this unique book is the first comprehensive guide to the discovery analysis and evaluation of natural experiments an increasingly popular methodology in the social sciences thad dunning provides an introduction to key issues in causal inference including model specification and emphasizes the importance of strong research design over complex statistical analysis surveying many examples of standard natural experiments regression discontinuity designs and instrumental variables designs dunning

highlights both the strengths and potential weaknesses of these methods aiding researchers in better harnessing the promise of natural experiments while avoiding the pitfalls dunning also demonstrates the contribution of qualitative methods to natural experiments and proposes new ways to integrate qualitative and quantitative techniques chapters complete with exercises and appendices covering specialized topics such as cluster randomized natural experiments make this an ideal teaching tool as well as a valuable book for professional researchers

francis bacon introduced his contemporaries to a new way of investigating nature he called it natural and experimental history despite its rather traditional name bacon s natural and experimental history was a new discipline it comprised new ideas new practices and new models of collaborative research this new discipline was in many ways a surprisingly successful project it provided early modern naturalists with tools methods and models for both investigating nature and writing about their subject it also offered a set of norms and values for guiding research and yet this new discipline was not a science of nature it was more like an art this book aims to trace the emergence evolution and reception of francis bacon s art of experimental natural history

the activities in this book are the results of those years trying things out and improving my home made apparatus to increase the reliability and accuracy of the results these experiments and teacher demonstrations are the ones i presently do in my own classes the little carts and friction boxes now gathering dust in a closet most of these experiments can be performed very inexpensively in my descriptions i indicate how to do the experiment with little investment making the experiments accessible to schools and homes with limited funds over the years i have enhanced some of these experiments with digital electronics for data collection this makes the experiment more interesting to the students who are surrounded with digital electronics and tend to find anything else uninteresting the electronics also increase accuracy significantly improving results and making the analysis more satisfying but my experience has shown that the simple act of doing an experiment outside with a pickup truck is so exciting for the students that they will love it whether you collect force data with fancy digital equipment or with lowly bathroom scales purchased from a discount store as i did for many years if budgetary constraints are an issue for you start doing the experiments without the fancy digital equipment you can modify the

experiment and add the electronics over time as funds become available i know there are a lot of books out there with ideas for science experiments but the emphasis in this book is on experiments that are captivating are low cost at least initially provide solid opportunities to do physics and a little chemistry and use equipment that is either already familiar or worth knowing about i hope some of these experiments will enhance your own classes
