today's architecture has failed the body with its long heritage of purity of form and aesthetic of cleanliness a resurgence of interest in flesh especially in art has led to a politics of abjection completely changing traditional aesthetics and is now giving light to an alternative discussion about the body in architecture this book is dedicated to a future vision of the body in architecture questioning the contemporary relationship between our human flesh and the changing architectural flesh through the analysis and design of a variety of buildings and projects flesh is proposed as a concept that extends the meaning of skin one of architecture's most fundamental metaphors it seeks to challenge a common misunderstanding of skin as a flat and thin surface in a time when a pervasive discourse about the impact of digital technologies risks turning the architectural skin ever more disembodied this book argues for a thick embodied flesh by exploring architectural interfaces that are truly inhabitable different concepts of flesh are investigated not only concerning the architectural and aesthetic but also the biological aspects the latter is materialised in form of synthetic neoplasms which are proposed as new semi living entities rather than more commonly derived from scaled up analogies

between biological systems and larger scale architectural constructs these neoplastic creations are identified as partly designed object and partly living material in which the line between the natural and the artificial is progressively blurred hybrid technologies and interdisciplinary work methodologies are thus required and lead to a revision of our current architectural practice

organised into 9 parts that highlight a wide range of architectural motives such as architecture as theatre stretching the vocabulary and the city of large and small the workbook provides inspiring key themes for readers to take their cue from when initiating a design motives cover a wide range of work that epitomise the theme these include historical and modernist examples things observed in the street work by current innovative architects and from cook's own rich archive weaving together a rich and vibrant visual scrapbook of the everyday and the architectural and past and present

in this urban corporis volume the city and the skin we asked the authors to read define and interpret the role of the skin as a facade as a protection as a compositional image of urban revelation without formal restrictions without ethical preconceptions the skin as part of the building designed to mediate the relationship the architectural skin understood as the technological system of delimitation between architectural space and unbuilt environment can be analyzed as a boundary system between interior and exterior the most evident expression of the identity of an artifact in this dual role of border and interface receptive as active the skin of an architecture seen also through art is charged with a double value an element of covering and protection and at the same time a tool of relationship and interface in fact towards the external world

transnational migration to israel in global comparative context explores both how and why the recent influx of approximately 200 000 non jewish migrants from dozens of countries across the globe has led state officials to declare in definitive terms that israel is not an immigration country despite its unwavering commitment to welcoming unlimited numbers of homeward bound jewish immigrants as this innovative volume illustrates the arrival of these economically motivated migrants about half of whom are defined by the state as legal and half as illegal has dramatically transformed the local labor economy of israel palestine moreover the presence of labor migrants along with smaller groups of asylum seekers and victims of trafficking in women has also generated a wide array of complicated legal policy related cultural and ideological questions and dilemmas for the israeli state local municipalities and civil society taking both the palestinian israeli conflict and israel's newfound embeddedness in globalizing labor markets as backdrop this multidisciplinary collection investigates the causes as well as the consequences of these new waves of transnational migration to israel both in comparison to other world regions and in terms of three interrelated levels of analysis first the micro level of migrants everyday experience second the meso level of state and

institutional policies and practices and finally the macro level of global political economic trends and processes bringing together a dynamic array of pioneering senior researchers along with more junior scholars the volume is distinctive not only in its incisive comparisons between israel and other destination countries but also in its multifaceted analysis of how the israeli migration regime has shaped constrained and on occasion been challenged by the arrival of these largely unanticipated migrants among the themes analyzed are the relationship between transnational migration processes and the simmering israeli
