the language of mathematics was awarded the ew beth dissertation prize for outstanding dissertations in the fields of logic language and information it innovatively combines techniques from linguistics philosophy of mathematics and computation to give the first wide ranging analysis of mathematical language it focuses particularly on a method for determining the complete meaning of mathematical texts and on resolving technical deficiencies in all standard accounts of the foundations of mathematics the thesis does far more than is required for a phd it is more like a lifetime s work packed into three years and is a truly exceptional achievement timothy gowers

the book emerges from several contemporary concerns in mathematics language and mathematics education however the book takes a different stance with respect to language by combining discussion of linguistics and mathematics using examples from each to illustrate the other the picture that emerges is of a subject that is much more contingent much more relative much more subject to human experience than is usually accepted another way of expressing this is that the thesis of the book takes the idea of mathematics as a human creation and using the evidence from language comes to more radical conclusions than most writers allow

elementary set theory accustoms the students to mathematical abstraction includes the standard constructions of relations functions and orderings and leads to a discussion of the various orders of infinity the material on logic covers not only the standard statement logic and first order predicate logic but includes an introduction to formal systems axiomatization and model theory the section on algebra is presented with an emphasis on lattices as well as boolean and heyting algebras background for recent research in natural language semantics includes sections on lambda abstraction and generalized quantifiers chapters on automata theory and

formal languages contain a discussion of languages between context free and context sensitive and form the background for much current work in syntactic theory and computational linguistics the many exercises not only reinforce basic skills but offer an entry to linguistic applications of mathematical concepts for upper level undergraduate students and graduate students in theoretical linguistics computer science students with interests in computational linguistics logic programming and artificial intelligence mathematicians and logicians with interests in linguistics and the semantics of natural language

concerned with various aspects of language in mathematics education this book aims to reveal some of the ambiguities and complexities in the way language is used in the mathematics curriculum it aims to present current perspectives and review key issues in mathematics education

in this his magnum opus distinguished linguist zellig harris presents a formal theory of language structure in which syntax is characterized as an orderly system of departures from random combinations of sounds words and indeed of all elements of language

by mathematics of language is meant the mathematical properties that may under certain assumptions about modeling be attributed to human languages and related symbolic systems as well as the increasingly active and autonomous scholarly discipline that studies such things more specifically the use of techniques developed in a variety of pure and applied mathematics including logic and the theory of computation in the discovery and articulation of insights into the structure of language some of the contributions to this volume deal primarily with foundational issues others with specific models and theoretical issues a few are concerned with semantics but most focus on syntax the papers in this volume reveal applications of the several fields of the theory of computation formal languages automata complexity formal logic topology set theory graph theory and statistics the book also shows a keen interest in developing mathematical models that are especially suited to natural languages
