software is one of the most important products in human history and is widely used by all industries and all countries it is also one of the most expensive and labor intensive products in human history software also has very poor quality that has caused many major disasters and wasted many millions of dollars software is also the target of frequent and increasingly serious cyber attacks among the reasons for these software problems is a chronic lack of reliable quantified data this reference provides quantified data from many countries and many

industries based on about 26 000 projects developed using a variety of methodologies and team experience levels the data has been gathered between 1970 and 2017 so interesting historical trends are available since current average software productivity and quality results are suboptimal this book focuses on best in class results and shows not only quantified quality and productivity data from best in class organizations but also the technology stacks used to achieve best in class results the overall goal of this book is to encourage the adoption of best in class software metrics and best in class technology stacks it does so by providing current data on average software schedules effort costs and quality for several industries and countries because productivity and quality vary by technology and size the book presents quantitative results for applications between 100 function points and 100 000 function points it shows quality results using defect potential and dre metrics because the number one cost driver for software is finding and fixing bugs the book presents data on cost of quality for software projects and discusses technical debt but that metric is not standardized finally the book includes some data on three years of software maintenance and enhancements as well as some data on total cost of ownership

grid computing requires the use of software that can divide and farm out pieces of a program to as many as several thousand computers this book explores processes and techniques needed to create a successful grid infrastructure leading researchers in europe and the us look at the development of specialist tools and environments which will encourage the convergence of the parallel programming distributed computing and data management communities specific topics covered include an overview of structural and behavioural properties of computer grid applications discussion of alternative programming techniques case studies displaying the potential of computer grids in solving real problems this book is unique in its outline of the needs of computational grids both in integration of high end resources using ogsa globus and the loose integration of peer 2 peer entropia united devices readers will gain an insight on the limitations of existing approaches as well as the standardisation activities currently taking place

stronger writing skills for teens offers middle and high school teachers strategies techniques and materials for teaching adolescent writing in a variety of modes a practical and useful resource for classroom teachers the book focuses on quality writing instruction within the modes of writing as defined by common core state standards examples of student work are included to illustrate effectively designed assignments and strategies for writing and revising it includes methods for teaching vocabulary and academic language to help students improve word choice and use of language in their writing tools for assessing and grading

student writing are also included as well as suggestions and resources for effectively using writing rubrics and scoring guides narrative expository explanatory argument and research writing are discussed with specific strategies suggested materials and ways to approach the modes teachers will also find suggestions for helping students learn to incorporate multimodal text into their writing and successfully write in digital contexts as well as methods for helping students master timed and on demand writing
