this work is in two parts it began as a general investigation of vagueness in natural languages the sorites paradox came to dominate the work however and the second part of the book consists in an discussion of that puzzle and related problems the first part contains a general discussion of the nature of vagueness and its sources i discuss various conceptions of vagueness in chapter 1 and outline some of the problems to do with the conception of vagueness as a linguistic phenomenon the most interesting of these is the sorites paradox which occurs where natural languages exhibit a particular variety of borderline case vagueness i discuss some sources of vagueness of the borderline case variety and views of the relation between linguistic behaviour and languages which are vague in this sense i argue in chapter 2 that these problems are not to be easily avoided by statistical averaging techniques or attempts to provide a mathematical model of consensus in linguistic usage i also consider in chapter 3 various approaches to the problem of providing an adequate logic and semantics for vague natural languages and argue against two currently popular approaches to vagueness these are supervaluation

accounts which attempt to provide precise semantic models for vague languages based on the notion of specification spaces and attempts to replace the laws of classical logic with systems of fuzzy logic

a paradox from the greek word meaning contrary to expectation is a statement that seems self contradictory but may be true exploring the distinction between truth and plausibility the author presents a standardized straightforward approach for deciphering paradoxes one that can be applied to all their forms whether clever wordplay or more complex issues

through an examination of the work of the ancient daoist thinker zhuangzi the author here explores a philosophy that rejects the absoluteness of dichotomies with a hermeneutic and pragmatic method that is rooted in the fertile soil of a middle ground

most expressions in natural language are vague but what is the best semantic treatment of terms like heap red and child and what is the logic of arguments involving this kind of vague expression these questions are receiving increasing philosophical attention and in this book first published in 2000 rosanna keefe explores the questions of what we should want from an account of vagueness and how we should assess rival theories her discussion ranges widely and comprehensively over the main theories of vagueness and their supporting arguments and she offers a powerful and original defence of a form of supervaluationism a theory that requires almost no deviation from standard logic yet can accommodate the lack of sharp boundaries to vague predicates and deal with the paradoxes of vagueness in a methodologically satisfying way her study will be of particular interest to readers in philosophy of language and of
