we examine the composition and drivers of cross border bank lending between 1995 and 2012 distinguishing between syndicated and non syndicated loans we show that on balance sheet syndicated loan exposures account for almost one third of total cross border loan exposures during this period furthermore syndicated loan exposures increased during the global financial crisis due to large drawdowns on credit lines extended before the crisis our empirical analysis of the drivers of cross border loan exposures in a large bilateral dataset shows three

main results first banks with lower levels of capital favor syndicated over other kinds of cross border loans second borrower country characteristics such as level of development economic size and capital account openness are less important in driving syndicated than non syndicated loan activity suggesting a diversification motive for syndication third information asymmetries between lender and borrower countries which are important both in normal and crisis times became more binding for both types of cross border lending activity during the recent crisis

this book examines how the on paper hydropower boom impacts the safe and fair access to water and energy in emerging economies the global hydropower boom is largely made up of small hydropower plants located in emerging economies but a lack of funding over ambitious planning and corruption have halted the production of these projects describing this state as the on paper hydropower boom this book shifts attention to the hydrosocial problems arising from hydropower projects that remain on paper it examines how these proposed but unbuilt projects can lead to disruptions in the control and governance of water resources and increase the international dependence of emerging countries due to deep problems in their sustainable development planning and how all this can affect both ecosystems and the communities that depend on them in doing so it critically examines the dominant discourses on energy security and sustainable development emphasises the extent to which the effects of global imperialism are at play and examines the effects of international power relations in the hydrosocial context and their implications for perpetuating international relations of dependency further this book provides a unique perspective on the global hydropower boom by highlighting that although the global hydropower boom largely remains on paper it can still have a significant impact on human water systems contributing to the debate on hydrosocial relationships each chapter offers an insightful examination of the social cultural and political interactions that humans have with water and uses these insights to provide a nuanced understanding of the challenges and issues associated with on paper plans this book will be of great interest to students and scholars of water politics water governance political ecology corruption and environmental economics as well as sustainable development policymakers
