analysing a series of narratives that described women who transformed the worlds they lived in this book introduces students and scholars to the lives of the women of joseon korea 1550 1700 exploring their interactions both at home and abroad this book shows how the agency of these women reached far across the globe the narratives explored here appeared in a wide range of written visual and material forms from woodcuts and printed texts letters journals and chronicles to inscriptions on monuments and

were produced by Joseon's elite officials, grieving families, Japanese civic administrators, Jesuit missionaries, local historians of the Japanese ceramic industry, and men of the Dutch East India Company. The women whose voices, lives, and actions were presented in these texts lived during a time when Joseon Korea was undergoing substantial social, political, and cultural changes. Their works described women's capacity to transform in ways large and small themselves, their families, and society around them. Interest in such women was not limited to a readership within the kingdom alone in this period but was reported across transnational networks to a global audience from Japan to Europe, carrying messages about Korean women's agency far and wide. *Encounter, Transformation, and Agency in a Connected World: Narratives of Korean Women, 1550–1700* is essential reading for students and scholars interested in the history of Joseon Korea and Asia and the history of women in the early modern period more broadly.

Examining a wide range of ekphrastic poems, David Kennedy argues that contemporary British poets writing out of both mainstream and avant-garde traditions challenge established critical models of ekphrasis with work that is more complex than representational or counter-representational responses to paintings in museums and galleries. Even when the poem appears to be straightforwardly representational, it is often selectively so, producing a virtual work that doesn't exist in actuality. Poets such as Kelvin Corcoran, Peter Hughes, and Gillian Clarke, Kennedy suggests, relish the ekphrastic encounter as one in which word and image become mutually destabilizing. Similarly, other poets engage with the source artwork as a performance that participates in the ethical realm, showing that the ethical turn in ekphrastic poetry is often powerfully gendered. Kennedy also surveys a range of ekphrastic poets from the Renaissance and nineteenth century to trace a tradition of female ekphrastic poetry that includes Pauline Stainer and Frances Presley. Kennedy concludes with a critique of ekphrastic exercises in creative writing teaching, proposing that ekphrastic writing that takes greater account of performance and spectatorship may offer more fruitful models for the classroom than the narrativizing of images.

This engaging collection of essays offers new insights into the multi-faceted and changing encounters of Muslims and Christians in Africa in the past and closer to the present.

This book considers the transformative impact of global trade and production networks on local economies, work, and labour organization, and various forms and meanings of community. It examines the socio-economic transformation in Asia and the restructuring of manufacturing industries, ports, and the information technology sector.

The amount of space debris is growing at an alarming rate, raising concern about its collision with operational spacecraft. This book analyzes the probability of such a collision when the orbits of two approaching objects are based on measurements with inherent errors. Many recent papers have dealt with the methodology of computing the collision probability in the encounter region, but they have assumed that the encounter is a flyby and is short-term, with the trajectories of the objects represented by straight lines. By contrast, spacecraft collision probability: the outgrowth of the authors' research during the past two decades deals not only with those cases but also with important long-term cases in which objects spend protracted periods in the vicinity of each other. An extensive chapter is included on the International Space Station (ISS) to demonstrate how one would accurately gauge its probability of collision. The ISS is modeled according to its actual complex shape, component by component, enabling the detailed computation of a more realistic collision probability than one would obtain by the routine practice of modeling it as a sphere. In addition, the author developed Excel macros to obtain the numerical tables and graphical plots appearing in the book. That software is available on the supporting materials page of the AIAA site.
