Cameron Denis Fisette Charles Dudley Warner Helen Beebee Charles Dudley Warner Ludwig Erckmann George Thomas Bettany Charles Dudley Warner Timothy Dwight Timothy Dwight George Palmer Putnam Charles Dudley Warner*

metaphysics asks questions about existence for example do numbers really exist metametaphysics asks questions about metaphysics for example do its questions have determinate answers if so are these answers deep and important or are they merely a matter of how we use words what is the proper methodology for their resolution these questions have received a heightened degree of attention lately with new varieties of ontological deflationism and pluralism challenging the kind of realism that has become orthodoxy in contemporary analytic metaphysics this volume concerns the status and ambitions of metaphysics as a discipline it brings together many of the central figures in the debate with their most recent work on the semantics epistemology and methodology of metaphysics

this book is a gentle but rigorous introduction to formal logic it is intended primarily for use at the college level however it can also be used for advanced secondary school students and it can be used at the start of graduate school for those who have not yet seen the material the approach to teaching logic used here emerged from more than 20

years of teaching logic to students at stanford university and from teaching logic to tens of thousands of others via online courses on the world wide the approach differs from that taken by other books in logic in two essential ways one having to do with content the other with form like many other books on logic this one covers logical syntax and semantics and proof theory plus induction however unlike other books this book begins with herbrand semantics rather than the more traditional tarskian semantics this approach makes the material considerably easier for students to understand and leaves them with a deeper understanding of what logic is all about in addition to this text there are online exercises with automated grading online logic tools and applications online videos of lectures and an online forum for discussion they are available at [intrologic.stanford.edu](http://intrologic.stanford.edu)

modality is a subject that has attracted increasing attention over the last decade or so in english and to a lesser extent in german there is a class of syntactically restricted auxiliary verbs that is primarily associated with modal concepts following on from work presented in his edinburgh phd thesis and suggestions made in lyons semantics 1977 the author discusses the differences between modal logic and linguistic modality and then examines what kind of verbal expression whether auxiliary or not can reflect the various modality parameters a chapter each is devoted to epistemic logical deontic dynamic dispositional and bouletic modality and to how modality interacts with sentence type the discussion mainly concerns english but with a number of side glances at german in a final chapter the author sets up semantic specifications for the modal auxiliaries in the light of his findings in previous chapters

this monograph examines truth in fiction by applying the techniques of a naturalized logic of human cognitive practices the author structures his project around two focal questions what would it take to write a book about truth in literary discourse with reasonable promise of getting it right what would it take to write a book about truth in fiction as true to the facts of lived literary experience as objectivity allows it is argued that the most semantically distinctive feature of the sentences of fiction is that they are unambiguously true and false together it is true that sherlock holmes lived at 221b baker street and also concurrently false that he did a second distinctive feature of fiction is that the reader at large knows of this inconsistency and isn't in the least cognitively molested by it why it is asked would this be so what would explain it two answers are developed according to the no contradiction thesis the semantically tangled sentences of fiction are indeed logically inconsistent but not logically contradictory according to the no bother thesis if the inconsistencies of fiction were contradictory a properly contrived logic for the rational management of inconsistency would explain why readers at large are not thrown off cognitive stride by their embrace of those contradictions as developed here the account of fiction suggests the presence of an underlying three or four valued dialethic logic the author shows this to be a mistaken impression there are only two truth values in his logic of fiction the naturalized logic of truth in fiction jettisons some of the standard assumptions and analytical tools of contemporary philosophy chiefly because the neurotypical linguistic and cognitive behaviour of humanity at large is at variance with them using the resources of a causal response epistemology in tandem with the naturalized logic the theory produced here is data driven empirically sensitive and open to a circumspect collaboration with the empirical sciences of language and cognition

chains of being argues that there can be infinite chains of dependence or grounding cameron also defends the view that there can be circular relations of ontological dependence or grounding and uses these claims to explore issues in logic and ontology

the book discusses franz brentano s impact on austrian philosophy it contains both a critical reassessment of brentano s place in the development of austrian philosophy at the turn of the 20th century and a reevaluation of the impact and significance of his philosophy of mind or descriptive psychology which was brentano s most important contribution to contemporary philosophy and to the philosophy in vienna in addition the relation between brentano phenomenology and the vienna circle is investigated together with a related documentation of brentano s disciple alfred kastil in german the general part deals with the ongoing discussion of carnap s aufbau vienna circle lecture by alan chalmers and the philosophy of mind with a focus on physicalism as discussed by carnap and wittgenstein gergely ambrus as usual two reviews of recent publications in the philosophy of mathematics paolo mancosu and research on otto neurath s lifework jordi cat adam tuboly are included as related research contributions this book is of interest to students historians and philosophers dealing with the history of austrian and german philosophy in the 19th and 20th century

david k lewis 1941 2001 was unquestionably one of the most important analytic philosophers of the twentieth century writing papers and books largely but not exclusively in metaphysics that set the intellectual agenda across a huge variety of topics in the last three decades some twenty years after his death this collection of essays reflects the historical importance of lewis s work by bringing together a range of scholarly reflections on his work the essays consider a range of topics including the nature of metaphysics the epistemology of necessary truths possibility naturalness supervenience time travel causation semantics and ethics several of them draw on an exciting new body of material in the lewisian corpus his extensive correspondence recently published in two volumes oup 2020 the wide ranging topics of these essays illustrate the impressive extent of lewis s thought and his reach across most areas of analytic philosophy the chapters collected in this volume adds to the increasing literature on the philosophy of david k lewis and will be an important book for those examining his role in the history of analytic philosophy
