recent research in problem solving has shifted its focus to actual classroom implementation and what is really going on during problem solving when it is used regularly in classroom this book seeks to stay on top of that trend by approaching diverse aspects of current problem solving research covering three broad themes firstly it explores the role of teachers in problem solving classrooms and their professional development moving onto secondly the role of students when solving problems with particular consideration of factors like group work discussion role of students in discussions and the effect of students engagement on their self perception and their view of mathematics finally the book considers the question of problem solving in mathematics instruction as it overlaps with problem design problem solving situations and actual classroom implementation the volume brings together diverse contributors from a variety of countries and with wide and varied experiences combining the voices of leading and developing researchers the book will be of interest to any reader keeping on the frontiers of research in problem solving more specifically researchers and graduate students in mathematics education researchers in problem solving as well as teachers and practitioners

this volume records and disseminates selected papers from the stinson66 conference including surveys prospectives and papers presenting original and current research it contains four accessible surveys of topics in combinatorial designs and related topics ranging from a tutorial survey of connections to classical group theory to surveys of hot

topics in current research it also contains a prospective paper identifying topics for future research efforts co authored by one of the elder statesmen of the field alex rosa finally the research papers examine topics ranging from pure mathematics to applied work in computing networking communications and cryptography for students and newcomers to these topics the volume provides accessible survey material that does not have onerous prerequisites the breadth of topics reflects the vibrancy of the field in a way that can be appreciated by all researchers the papers present important advances on theory and applications which also benefit advanced researchers

this volume contains the articles presented at the 20th international meshing roundtable imr organized in part by sandia national laboratories and was held in paris france on oct 23 26 2011 this is the first year the imr was held outside the united states territory other sponsors of the 20th imr are systematic paris region systems ict cluster aiaa nafems cea and nsf the sandia national laboratories started the first imr in 1992 and the conference has been held annually since each year the imr brings together researchers developers and application experts from a variety of disciplines to present and discuss ideas on mesh generation and related topics the topics covered by the imr have applications in numerical analysis computational geometry computer graphics as well as other areas and the presentations describe novel work ranging from theory to application
