it seems likely that no project of this magnitude is undertaken in the absence of several motivations this book is no exception there are from our perspective at least two rational reasons for conducting this cataloging and organizational effort the first of these is the obvious fact that a very large number of macrocyclic polyethers have now been prepared and nowhere is there a comprehensive listing of them a number of excellent reviews have been published dealing with one or more aspects of macrocycle chemistry but we felt a great need for a single source listing known compounds we have the fore attempted to provide such a listing to assist ourselves in keeping track as well as we hope helping others in this field we also felt that there was a need for a survey of methods which have been utilized in the syntheses of these cation binders so that the novice could establish some starting point wherever possible we have also attempted to point to the motivations which en gendered the various syntheses the somewhat irrational reason which propelled us into this endeavor was the ques tionaling of charlie morgan who often asked if one or another obscure compound had been synthesized as often as not we were uncertain arid now at least have a reference which if not absolutely complete will at least save face
