mechanical behaviour of materials iv is a collection of papers dealing with engineering issues of the strength of materials solid mechanics and materials science one paper analyzes the growth of subcritical cracks subject to cyclic stresses as a result of fatigue or material microstructure another paper shows the retention of maximum strength of some aircraft parts which have been in service for up to 20 years and subjected to stress and exposure cycles due in part to the usage of high quality surface paint one paper discusses the regularities in deformation and failure of structural steels and alloys at cryogenic temperatures under conditions of static and cyclic low cycle loading the paper shows that the type of stress is evident in materials which lose their plastic properties as the temperature decreases the materials parameters that affect plastic instability and sheet formability are strain hardening strain rate sensitivity and plastic anisotropy experiments indicate the importance of stress state large strains and path changes on the strain hardening response and subsequent stability of the material another paper describes the relationship between microstructure and hydrogen embrittlement in aspects of fracture mechanics as well as the correlation between hydrogen embrittlement and carbon equivalent the collection can prove valuable for structural engineers materials engineers design engineers and investigators involved in the study of the strength of materials

collaborative networks for a sustainable world aiming to reach a sustainable world calls for a wider collaboration among multiple stakeholders from different origins as the changes needed for sustainability exceed the capacity and capability of any individual actor in recent years there has been a growing awareness both in the political sphere and in civil society including the business sectors on the importance of sustainability therefore this is an important and timely research issue not only in terms of systems design but also as an effort to bring and integrate contributions from different disciplines when designing and engineering those systems the discipline of collaborative networks especially which has already emerged in many application sectors shall play a key role in the implementation of effective sustainability strategies prove 2010 focused on sharing knowledge and experiences as well as identifying directions for further research and development in this area the conference dressed models infrastructures support tools and governance principles developed for collaborative networks as important resources to support multi stakeholder sustainable developments furthermore the challenges of this theme open new research directions for cns prove 2010 held in st
