geometry has fascinated philosophers since the days of thales and pythagoras in the 17th and 18th centuries it provided a paradigm of knowledge after which some thinkers tried to pattern their own metaphysical systems but after the discovery of non euclidean geometries in the 19th century the nature and scope of geometry became a bone of contention philosophical concern with geometry increased in the 1920 s after einstein used riemannian geometry in his theory of gravitation during the last fifteen or twenty years renewed interest in the latter theory prompted by advances in cosmology has brought geometry once again to the forefront of philosophical discussion the issues at stake in the current epistemological debate about geometry can only be understood in the light of history and in fact most recent works on the subject include historical material in this book i try to give a selective critical survey of modern philosophy of geometry during its seminal period which can be said to have begun shortly after 1850 with riemann s generalized conception of space and to achieve some sort of completion at the turn of the century with hilbert s axiomatics and poincare s conventionalism the philosophy of geometry of einstein and his contemporaries will be the subject of another book the book is divided into four chapters chapter 1 provides back ground information about the history of science and philosophy

i am very happy and honoured to have so many famous contrib utors from around the world presenting their knowledge and experience in this book including dr rufer who as early as 1967 attempted to improve the pressure volume curve of a child dying from rds using dried surfactant from dogs drs enhorn ing and robertson who were the first to treat rabbit fetuses with surfactant replacement and impressively demonstrated that sur factant improved lung mechanics and dr fujiwara who at the end of the 1970 s had already successfully treated the first babies with surfactant replacement and published this work al ready in 1980 thus the idea of surfactant replacement therapy is now more or less 20 years old and almost 10 years have passed since the first publication by dr fujiwara of his impressive clinical results up to now september 1988 about 2 200 babies have been

treated worldwide with tracheal instillation of surfactant with most promising results the type of surfactant used varies from pure natural extracts from bovine or pig lungs to surfactant extracted from human amniotic fluid to pure phospholipids to date however there is still no surfactant commercially available except in japan in spite of the fact that it is urgently awaited by neonatologists and intensive care doctors throughout the world this volume is based on the contributions presented at the international congress on surfactant replacement therapy which was held in rotterdam the netherlands in november 1987
