every once in a while i get a chance to listen to broadcasts on the radio or watch networking on television and the more and more i do this the more and more i get deeply concerned with the quality of so called religious material presented on such via comments discussions lectures teachings etc every so often i get led to deal with some of the monumental misunderstandings that menace the messianic ministry mission momentum motion motive and

movement as these pessimistic provocational presentations prevent permeation of positive providential pressure on the profound populace's psyche patterns. I constantly think about the repercussions they have on the spiritual psyche. It is very unfortunate that we are letting our guards down and allowing this type of pessimistic provocational presentations to prevent the permeation of positive providential pressure on the profound populace's psyche patterns. There are two strategies/tactics ways to deal with this type of teaching and preaching: one is defensive and the other is offensive. The offensive tactic strategy way to guard against it is to constantly teach and preach against it, thereby exposing it for what it is and minimizing it. If not eliminating it, this is referred to as the sword of the spirit which is the word of God. The defensive tactic strategy way to guard against it is to block or prevent it from entering your mind by literally putting a spiritual device of some sort over your mind. This is referred to as the helmet of salvation.

The current Symbian Press list focuses very much on the small scale features of Symbian OS in a programming context. The architecture sourcebook is different; it's not a 'how to' book. It's a 'what and why' book and because it names names as it unwinds the design decisions which have shaped the OS, it is also a 'who' book. It will show where the OS came from, how it has evolved to be what it is, and provide a simple model for understanding what it is, how it is put together, and how to interface to it and work with it. It will also show why design decisions were made and will bring those decisions to life in the words of Symbian's key architects and developers, giving an insider feel to the book as it weaves the inside story around the architectural presentation. The book will describe the OS architecture in terms of the Symbian system model. It will show how the model breaks down the system into parts, what role the parts play in the system, how the parts are architected, what motivates their design, and how the design has evolved through the different releases of the system. Key system concepts will be described; design patterns will be explored and related to those from other operating systems. The unique features of Symbian OS will be highlighted and their motivation and evolution traced and described. The book will include a substantial reference section itemising the OS and its toolkit at component level and providing a reference entry for each component.
