this monograph focuses on the design of personalized and adaptive online interactive learning environment oile to enhance students learning in and about complex dynamic systems cds numerous studies show that students experience difficulties when learning in and about cds the difficulties are due to challenges originating from a the structural complexity of cds b the

production of dynamic behavior from the underlying systems structure and the methods, techniques and tools employed in the analysis of such systems. Despite the fact that studies have uncovered such learning challenges, it is still not well understood how we may effectively address these challenges. In this monograph, the authors provide some answers as to how we may best improve our cognitive capabilities to meet these challenges by way of effective instructional methods, techniques and tools and their implementation in the form of an ontology developed for this purpose. This ontology builds on a five-step holistic instructional design framework: identification of instructional design models, identification of authentic learning material, identification of instructional methods, identification of instructional techniques and design of the interface, and implementation of the tool. In this ontology development, six well-documented instructional design models were considered: a four-component instructional design, first principles of instruction, constructivist learning environment, task-centered instruction, cognitive apprenticeship, and elaboration theory.

This book compares research findings on particular topics of interactive learning to identify areas of research and discusses possibilities of research cooperation. It presents an argument that in the UK, the emphasis on small group work using a microcomputer is the result of pedagogical opinion.
