the louis stokes alliances for minority participation
Isamp program of the us national science foundation has been a primary force for raising the success and graduation of minority students in stem for 30 years increasing the number of underrepresented students earning baccalaureate degrees and entering graduate school in stem is

the goal of Isamp this goal has been nearly achieved through the formation of alliances of degree granting institutions of higher learning varying from community colleges to major research institutions currently there are 59 alliances including more than 400 institutions Isamp is responsible for more than 650 000 bachelor s degrees earned by minority students in stem the papers for this research topic should focus on the use of Isamp activities programs and collaborations to develop pathways to success and graduation of stem majors from minority groups that underrepresented in stem these pathways can include any segment from pre college through graduate school areas of special interest include mentoring research experiences transitions between levels and novel approaches for retention the studies should be research based and rigorous they can be pure research studies curriculum and design or literature reviews but they must be at a cutting edge level and be subject to detailed review and assessment

hermanowicz asks an important question why do college student departure rates vary among elite institutions of higher learning in the united states this book breaks new ground as this question has not been previously explored in an empirical way an empirical treatment of this question is important both theoretically and practically this volume makes a substantial contribution to the voluminous body of literature on college student departure

this book explains why so few efforts at reforming science education are successful and why it is that the 300 studies on the subject published over the past decade have done little more than add to a growing body of literature the book describes programs which are successful in terms of faculty accomplishments students graduated

and entering advanced study or professional workplace and showing evidence of high morale among both faculty and undergraduates common elements in many of these programs are abandonment of an almost exclusive emphasis on problem solving and modification of the lecture format to permit teaching of underlying concepts other variations in traditional introductory physics and chemistry courses are aimed at persuading those simply fulfilling graduation requirements to major in science at bringing minority students into the fold or at combining physics or various sub fields of chemistry in different ways to promote better understanding harvard s chem phys is provided as an example of such a combination but also as a case study of how innovation can be stymied by a lack of university wide change the author uses methods of ethnography in reporting what makes individual programs interesting what their faculty are doing and what program participants are thinking pr
