the core of classical homotopy theory is a body of ideas and theorems that emerged in the 1950s and was later largely codified in the notion of a model category this core includes the notions of fibration and cofibration cw complexes long fiber and cofiber sequences loop spaces and suspensions and so on brown s representability theorems show that homology and cohomology are also contained in classical homotopy theory this text develops classical homotopy theory from a modern point of view meaning that the exposition is informed by the theory of model categories and that homotopy limits and colimits play central roles the exposition is guided by the principle that it is generally preferable to prove topological results using topology rather than algebra the language and basic theory of homotopy limits and colimits make it possible to penetrate deep into the subject with just the rudiments of algebra the text does reach advanced territory including the steenrod algebra bott periodicity localization the exponent theorem of cohen moore and neisendorfer and miller s theorem on the sullivan conjecture thus the reader is given the tools needed to understand and participate in research at part of the current frontier of homotopy theory proofs are not provided outright rather they are presented in the form of directed problem sets to the

expert these read as terse proofs to novices they are challenges that draw them in and help them to thoroughly understand the arguments

topological  $k$  theory is one of the most important invariants for noncommutative algebras bott periodicity homotopy invariance and various long exact sequences distinguish it from algebraic  $k$  theory this book describes a bivariant  $k$  theory for bornological algebras which provides a vast generalization of topological  $k$  theory in addition it details other approaches to bivariant  $k$  theories for operator algebras the book studies a number of applications including  $k$  theory of crossed products the baum connes assembly map twisted  $k$  theory with some of its applications and some variants of the atiyah singer index theorem
