the 2001 national research council nrc report basic research opportunities in earth science broes described how basic research in the earth sciences serves five national imperatives 1 discovery use and conservation of natural resources 2 characterization and mitigation of natural hazards 3 geotechnical support of commercial and infrastructure development 4 stewardship of the environment and 5 terrestrial surveillance for global security and national defense this perspective is even more pressing today and will persist into the future with ever growing emphasis today s world with headlines dominated by issues involving fossil fuel and water resources earthquake and tsunami disasters claiming hundreds of thousands of lives and causing hundreds of billions of dollars in damages profound environmental changes associated

with the evolving climate system and nuclear weapons proliferation and testing has many urgent societal issues that need to be informed by sound understanding of the earth sciences a national strategy to sustain basic research and training of expertise across the full spectrum of the earth sciences is motivated by these national imperatives new research opportunities in the earth sciences identifies new and emerging research opportunities in the earth sciences over the next decade including surface and deep earth processes and interdisciplinary research with fields such as ocean and atmospheric sciences biology engineering computer science and social and behavioral sciences the report also identifies key instrumentation and facilities needed to support these new and emerging research opportunities the report describes opportunities for increased cooperation in these new and emerging areas between ear and other government agency programs industry and international programs and suggests new ways that ear can help train the next generation of earth scientists support young investigators and increase the participation of underrepresented groups in the field

understanding the effects of natural and human induced changes on the global environment and their implications requires a foundation of integrated observations of land sea air and space on which to build credible information products forecast models and other tools for making informed decisions the 2007 national research council report on decadal survey called for a renewal of the national commitment to a program of earth observations in which attention to securing practical benefits for humankind plays an equal role with the quest to acquire new knowledge about the earth system nasa responded favorably and aggressively to this survey embracing its overall recommendations for earth observations missions technology investments and priorities for the underlying science as a result the science and applications communities have made significant progress over the past 5 years however the committee on assessment of nasa s earth science program found that the survey vision is being realized at a far slower pace than was recommended principally because the required budget was not achieved exacerbating the budget shortfalls nasa earth science programs experienced launch failures and delays and the cost of implementing missions increased substantially as a result of changes in mission scope increases in launch vehicle costs and or the lack of availability of a medium class launch vehicle under estimation of costs by the decadal survey and unfunded programmatic changes that were required by congress and the office of management and budget in addition the national oceanic and atmospheric administration noaa has made significant reductions in scope to its future earth environmental observing satellites as it contends with budget shortfalls earth science and applications from space a midterm assessment of nasa s implementation of the decadal survey recommends a number of steps to better manage existing programs and to implement future programs that will be recommended by the next decadal survey the report also highlights the urgent need for the executive branch to develop and implement an overarching multiagency national strategy for earth observations from space a key recommendation of the 2007 decadal survey that remains unfulfilled

the key to earth history introduces students to the basic tools used by geologists to reconstruct the earth s history and shows how these tools can be used to chart the pattern of global environmental change since the formation of the earth some 4600 million years ago it tells a story of mountain building climate change and of the evolution of life and uses the north atlantic region europe and north america as a study area to illustrate this story divided into two parts the book shows how stratigraphy is the key to understanding the history of the earth the first part examines the basic stratigraphical methods used to establish date and interpret the rock record as the product of a series of events whithin earth history the second part presents the results obtained by geologists who have used these stratigraphical tools to reconstruct the pattern of global environmental change through geological time and focuses on the geological evolution of the north atlantic region the key to earth history is essential reading for geologists geographers and environmental

scientists as well as to all those interested in the story of the planet the authors provide no one with an alibi for bad stratigraphic teaching geoscientist the aims of this introductory textbook are to explain the process and pattern of earth history to generate interest and enthusiasm to make stratigraphy fun and exciting these aims are admirably achieved the holocene this is a great little book i found that not only was everything covered but that it was covered in a refreshing readable no nonsense fashion earth science reviews the key to earth history really should be compulsory reading for all geology students geologie

this self contained handbook provides a carefully researched compact source of key earth science information and data logically sorted by subject matter and then cross referenced appealing to both experts and non experts alike the book presents earth science and environmental science as closely intertwined it includes tables of the global distributions of fossil fuels contrasted by tables of the distribution of non fossil energy sources concise explanations cover the subject matters of geology geophysics oceans atmosphere with attention to environmental implications and resources

natural and human induced changes in earth s interior land surface biosphere atmosphere and oceans affect all aspects of life understanding these changes requires a range of observations acquired from land sea air and space based platforms to assist nasa noaa and usgs in developing these tools the nrc was asked to carry out a decadal strategy survey of earth science and applications from space that would develop the key scientific questions on which to focus earth and environmental observations in the period 2005 2015 and beyond and present a prioritized list of space programs missions and supporting activities to address these questions this report presents a vision for the earth science program an analysis of the existing earth observing system and recommendations to help restore its capabilities an assessment of and recommendations for new observations and missions for the next decade an examination of and recommendations for effective application of those observations and an analysis of how best to sustain that observation and applications system

focusing on the earth science content tested on the regents examination this thorough review guide contains extensive vocabulary review questions and memory jogger and digging deeper features hundreds of practice questions organized in the regents examination format help students familiarize themselves with look and feel of the actual exam
