neural networks as an estimate is considered a nonparametric approach the
estimation of a specific quantile of a data population is a widely used
statistical task and a comprehensive way to discover the true relationship
among variables it can be classified as nonparametric regression where it is
one of the standard tasks the most common selected levels for estimation
are the first second and third quartile 25 50 and 75 percent the quantile level
is given by alpha a 25 percent quantile for example has 25 percent of the
data distribution below the named quantile and 75 percent of the data
distribution above it sometimes the tail regions of a population characteristic
