the control of power systems and power plants is a subject of worldwide interest which continues to sustain a high level of research development and application papers pertaining to areas directly related to power systems and representing the state of the art methods are included in this volume the topics covered include security analysis dynamic state estimation voltage control power plant control stability analysis data communication expert systems and training simulators for power plants this interchange between those involved in the research and those involved in the practical applications of new ideas and developments provide a comprehensive reference source for all involved in the power industry

the theme of this paper is the analysis design and synthesis of multivariable linear systems with a particular view toward applications in state estimation a canonicalization procedure that provides a rationale for the design and analysis of constant linear multivariable systems is developed when a multivariable system is excited by state and observation noise a stochastic filter is usually required to estimate the system states a technique is developed that permits simple comparisons of the performances of kalman wiener and general constant linear filters both transient and steady state error behavior are considered and bounds that provide convenient guidelines for filter selection are obtained determination of a set of state variables for a constant linear multivariable system being simulated or synthesized can be made according to a minimum eigenvalue sensitivity criterion a procedure that provides the synthesized system with a sensitivity canonical representation is established author
